Definitions of Terms

Term	What is it?	What does it tell you?
Average Capital Growth	It is the aggregate capital growth amount over a time frame longer than one year, expressed as an annual percentage.	Average capital growth figures allow you to monitor the performance of different areas or properties over a period of time. Be aware that the average capital growth figures are not the total growth figures divided by time. This method would overstate annual growth as it would include capitalisation.
Capital Growth	The capital growth is the growth in house prices over a period of time, expressed in percentage.	Capital growth figures allow you to monitor the performance of different areas or properties over a period of time.
Median Value	Residex holds a current value for every property in its database. The median value for any region is the middle value when all values are arranged in order. Where median is ascribed to a date range, the value represents the median at the end date.	The median value tells you what a typical property is worth in an area. By knowing the cost of a typical property in the area, you can judge which areas you can afford to invest in.
Rental Yield	The rental yield is the amount of rent you can expect to receive in a year, expressed as a percentage of a property's value. (The rental yield is an annual figure.) Rental yield is the annual rent figure divided by the property value figure.	Rental yield figures allow you to compare rental income from areas or properties with different property values.
Total Return	A combination of both capital growth and rental income.	Total return figures allow you to compare the investment returns of different areas or properties.
