Calwell 10 year price trend

Source: Neoval

In Calwell, as of June 2026, the median house price recorded a solid gain, reaching approximately \$920K. This reflects a 6.4% increase over the last year and an impressive 93.7% rise over this same month 10 years ago. Units have also continued their upward trajectory, with the median unit price sitting at around \$700K, representing an 11.2% increase compared to this same month last year and a substantial 96.1% growth over the past decade. Both property types demonstrate strong long-term performance, with units outperforming houses annually and exhibiting stronger growth than broader capital city trends.

Calwell rental price growth

Property	Current Price	1Y \$ Growth	1Y % Growth	10Y \$ Growth	10Y % Growth
HOUSE	\$660	– \$30	–4.3%	+ \$210	+47%
UNIT	\$620	+ \$70	+12.7%	+ \$245	+65%

Source: Neoval

Calwell rental price trend

Source: Neoval

In Calwell, the median weekly rental rate for houses currently stands at approximately \$660, reflecting a notable decline of about 4.3% over the past year. Despite this, house rents have maintained robust long-term growth, approximately 46.7% higher than this same month 10 years ago. Conversely, units have recorded a solid gain, with median weekly rents reaching approximately \$620, an impressive increase of about 12.7% over the last year. This strong annual performance has occurred alongside an impressive decade-long upward trajectory, with unit rents advancing by approximately 65.3% since this same month 10 years ago, outperforming the house market and representing stronger growth than some capital city trends. These median weekly rental rates are all 12M rolling data approximations as of June 2026.

\$1M - \$1.5M	32	0
\$1.5M - \$2M	0	0
\$2M - \$3M	0	0
\$3M - \$4M	0	0
\$4M - \$5M	0	0
\$5M+	0	0

Source: Neoval

Calwell's property market, as of April 2026, demonstrates a robust concentration of sales activity across the mid-tier price brackets over the preceding 12 months. House sales were predominantly recorded between \$750K and \$1.5M, reflecting a strong demand segment, with 45 transactions occurring in the \$750K to \$1M range and a further 32 sales between \$1M and \$1.5M. The more accessible price points also recorded activity, with 10 houses and 3 units selling within the \$500K to \$750K bracket, representing ongoing interest in properties within this affordability band. No sales above \$1.5M were recorded, distinguishing this market from broader capital city trends that often feature more high-end luxury transactions.

Calwell monthly volume of new listings over the past 3 years

Number of new monthly listings

Listings from whole market including Ray White.

Source: Neoval

RWN

New listings in June 2026 recorded a strong 50% monthly gain in Calwell, reaching 6 properties. This has occurred alongside a 33.3% annual decrease compared to June 2025, with the current volume coinciding with that recorded in June 2024. The overall low listing volume reflects persistent supply constraints, reinforcing limited vendor activity. This local trend contrasts with the broader upward trajectory observed in new listings across some capital city markets, reflecting specific local supply dynamics.

Methodology

Pricing data

Price data is sourced from our research partners at Neoval Research Group, providing comprehensive coverage across all major Australian capital cities and regional markets. Price movements are calculated using median values to ensure accurate representation of typical market performance.

Why median?

The median provides a reliable measure of the “typical” market price by identifying the middle value when all sales are arranged in order. Unlike arithmetic averages, which can be distorted by extreme high or low sales, the median represents the price point where half the properties sold for more and half sold for less. This methodology is particularly valuable when analysing property markets as it reduces the impact of outliers – such as exceptionally expensive waterfront properties or distressed sales – providing a truer reflection of what most buyers and sellers experience in the market. The median effectively captures the centre of the market distribution, making it an ideal measure for tracking genuine price movements over time.

Tasmania exception: Due to licensing restrictions, median data from Neoval is not available for Tasmania. For Tasmanian markets, we utilise the Median Sales AVM Value from Cotality, which represents the median (50th percentile) estimated sales value of all properties based on the hedonic imputation method.

ABS region segmentation and naming convention

Our analysis utilises the Australian Bureau of Statistics (ABS) geographical classification system, employing GCC, SA4, SA3 and SA2 naming conventions as the statistical and computational standard established by the ABS. This hierarchical structure provides a consistent framework for analysing property markets at various geographical scales, from major metropolitan areas down to individual SA2s. The visual representation and practical application of these classifications can be explored through the ABS mapping portal at <https://maps.abs.gov.au>, which displays the 2021 GCC, SA4, SA3 and SA2 shape files. These are the same shape files and naming conventions used by Neoval in their price modelling computations, ensuring consistency between our data sources and official statistical boundaries.

For comparative analysis purposes, the Sunshine Coast and Gold Coast regions are classified alongside GCC Major City regions. This classification reflects their substantial price growth over recent years and their common comparison with major metropolitan markets. Given their economic significance and market characteristics, these regions are considered Major City regions for the purposes of this analysis.

Listing data

National property listing volumes are sourced from Domain, Australia's leading property portal, providing comprehensive coverage of new property listings across all markets.

National listings: presented as monthly counts spanning the last three years (2023-2025) to identify seasonal patterns and year-over-year trends in property supply. Major city and regional listings: current month data is presented with both monthly percentage change (comparison to previous month) and annual percentage change (comparison to same month in previous year) to highlight both short-term fluctuations and longer-term supply trends.

Sales count data

Sales count data by price point is sourced from Australian Property Monitors (APM) and Valuer General records, providing transaction data across all fixed price segments for market segmentation analysis. While filtered for residential properties only, some commercial or rural properties may be incorrectly classified as residential in the source data, potentially affecting data precision.

Temporal framework

All data series are presented on a monthly basis covering the three-year period from 2023 to 2025, enabling identification of seasonal patterns, cyclical trends, and year-over-year comparisons. This timeframe captures the full interest rate cycle from peak rates through to the current cutting cycle, providing context for current market dynamics. All data sources represent substantial market coverage but may not capture 100 per cent of market activity. Price data from Neoval provides broad market representation. Regional variations in data coverage may exist, with metropolitan markets generally providing more comprehensive data.

Commentary Generation Methodology

The market commentary throughout this report was generated using Google's Gemini 2.5 Flash, a state-of-the-art large language model chosen for its exceptional ability to analyse complex datasets and translate them into clear market insights. The model was fed comprehensive data from both our national report along with region specific metrics, enabling it to contextualise local movements within broader market trends. Through multiple iterations of refinement, we optimised the system to provide straightforward, factual descriptions of the data presented in charts and tables, avoiding speculation while highlighting key trends and significant data points. This approach represents our ongoing efforts to deliver consistent, data-driven commentary that accurately reflects underlying market information in accessible language for both property professionals and general readers.

Ray White Group Economics Team

The Ray White Economics team delivers independent research and analysis across residential, commercial, and rural property markets. Led by Chief Economist Nerida Conisbee, the team combines rigorous data analysis with deep market expertise to produce insights that are both credible and accessible.

Drawing on one of Australia's largest real estate datasets and a national network of market intelligence, the team tracks the trends, forces, and shifts shaping Australian real estate, helping buyers, sellers, and investors navigate with clarity and confidence.
