Curtin 10 year price trend

Source: Neoval

In Curtin, the median house price for July 2026 stands at approximately \$1.33M. This reflects a 3.7% decrease over the past year, yet maintains a strong 63.5% growth over the last decade. Unit median prices are approximately \$480K, registering a marginal 0.4% decline since this same month last year, while showcasing a robust 31.5% increase over the last ten years. This local performance, particularly for houses, represents a more pronounced adjustment compared to broader capital city trends, though long-term appreciation remains evident.

Curtin rental price growth

Property	Current Price	1Y \$ Growth	1Y % Growth	10Y \$ Growth	10Y % Growth
HOUSE	\$790	+ \$20	+2.6%	+ \$255	+48%
UNIT	\$500	+ \$15	+3.1%	+ \$170	+52%

Source: Neoval

Curtin rental price trend

Source: Neoval

Curtin's median weekly house rental rate for July 2026 approximates \$790, reflecting a 2.6% gain from this same month last year, and a solid 47.7% increase from a decade ago. Unit rentals recorded a median weekly rate of approximately \$500, marking a 3.1% rise annually and an impressive 51.5% surge over the past ten years. This consistent growth across both property types represents a robust local market performance, coinciding with broader strength observed in the ACT rental sector, especially for units which show stronger percentage growth over a decade.

\$5M+	0	0

Source: Neoval

For Curtin, ACT, the 12 months leading to May 2026 reflects a robust housing market concentrated in premium segments. The bulk of house sales, 46, occurred between \$1M and \$1.5M, coinciding with a solid 28 sales in the \$1.5M to \$2M range, collectively representing its core activity. A distinct luxury tier is also evident, with 5 properties trading between \$2M and \$3M, and a further 2 sales up to \$4M. Entry-level homes saw limited transactions, with one house at \$500K-\$750K and two at \$750K-\$1M. The unit market remains notably sparse, with just one unit sale recorded within the \$1M-\$1.5M bracket.

RWN

New listings in Curtin in July 2026 recorded a strong 150% monthly gain, reaching 10 properties. This represents an 11.1% increase compared to July 2025, and a solid 42.9% rise from July 2024, reflecting a consistent upward trajectory in vendor activity over the three-year period. This stronger local supply in Curtin contrasts with broader market dynamics, reinforcing the suburb's unique position amidst evolving supply-side trends.

Methodology

Pricing data

Price data is sourced from our research partners at Neoval Research Group, providing comprehensive coverage across all major Australian capital cities and regional markets. Price movements are calculated using median values to ensure accurate representation of typical market performance.

Why median?

The median provides a reliable measure of the “typical” market price by identifying the middle value when all sales are arranged in order. Unlike arithmetic averages, which can be distorted by extreme high or low sales, the median represents the price point where half the properties sold for more and half sold for less. This methodology is particularly valuable when analysing property markets as it reduces the impact of outliers – such as exceptionally expensive waterfront properties or distressed sales – providing a truer reflection of what most buyers and sellers experience in the market. The median effectively captures the centre of the market distribution, making it an ideal measure for tracking genuine price movements over time.

Tasmania exception: Due to licensing restrictions, median data from Neoval is not available for Tasmania. For Tasmanian markets, we utilise the Median Sales AVM Value from Cotality, which represents the median (50th percentile) estimated sales value of all properties based on the hedonic imputation method.

ABS region segmentation and naming convention

Our analysis utilises the Australian Bureau of Statistics (ABS) geographical classification system, employing GCC, SA4, SA3 and SA2 naming conventions as the statistical and computational standard established by the ABS. This hierarchical structure provides a consistent framework for analysing property markets at various geographical scales, from major metropolitan areas down to individual SA2s. The visual representation and practical application of these classifications can be explored through the ABS mapping portal at <https://maps.abs.gov.au>, which displays the 2021 GCC, SA4, SA3 and SA2 shape files. These are the same shape files and naming conventions used by Neoval in their price modelling computations, ensuring consistency between our data sources and official statistical boundaries.

For comparative analysis purposes, the Sunshine Coast and Gold Coast regions are classified alongside GCC Major City regions. This classification reflects their substantial price growth over recent years and their common comparison with major metropolitan markets. Given their economic significance and market characteristics, these regions are considered Major City regions for the purposes of this analysis.

Listing data

National property listing volumes are sourced from Domain, Australia's leading property portal, providing comprehensive coverage of new property listings across all markets.

National listings: presented as monthly counts spanning the last three years (2023-2025) to identify seasonal patterns and year-over-year trends in property supply. Major city and regional listings: current month data is presented with both monthly percentage change (comparison to previous month) and annual percentage change (comparison to same month in previous year) to highlight both short-term fluctuations and longer-term supply trends.

Sales count data

Sales count data by price point is sourced from Australian Property Monitors (APM) and Valuer General records, providing transaction data across all fixed price segments for market segmentation analysis. While filtered for residential properties only, some commercial or rural properties may be incorrectly classified as residential in the source data, potentially affecting data precision.

Temporal framework

All data series are presented on a monthly basis covering the three-year period from 2023 to 2025, enabling identification of seasonal patterns, cyclical trends, and year-over-year comparisons. This timeframe captures the full interest rate cycle from peak rates through to the current cutting cycle, providing context for current market dynamics. All data sources represent substantial market coverage but may not capture 100 per cent of market activity. Price data from Neoval provides broad market representation. Regional variations in data coverage may exist, with metropolitan markets generally providing more comprehensive data.

Commentary Generation Methodology

The market commentary throughout this report was generated using Google's Gemini 2.5 Flash, a state-of-the-art large language model chosen for its exceptional ability to analyse complex datasets and translate them into clear market insights. The model was fed comprehensive data from both our national report along with region specific metrics, enabling it to contextualise local movements within broader market trends. Through multiple iterations of refinement, we optimised the system to provide straightforward, factual descriptions of the data presented in charts and tables, avoiding speculation while highlighting key trends and significant data points. This approach represents our ongoing efforts to deliver consistent, data-driven commentary that accurately reflects underlying market information in accessible language for both property professionals and general readers.

Ray White Group Economics Team

The Ray White Economics team delivers independent research and analysis across residential, commercial, and rural property markets. Led by Chief Economist Nerida Conisbee, the team combines rigorous data analysis with deep market expertise to produce insights that are both credible and accessible.

Drawing on one of Australia's largest real estate datasets and a national network of market intelligence, the team tracks the trends, forces, and shifts shaping Australian real estate, helping buyers, sellers, and investors navigate with clarity and confidence.
