Macgregor 10 year price trend

Source: Neoval

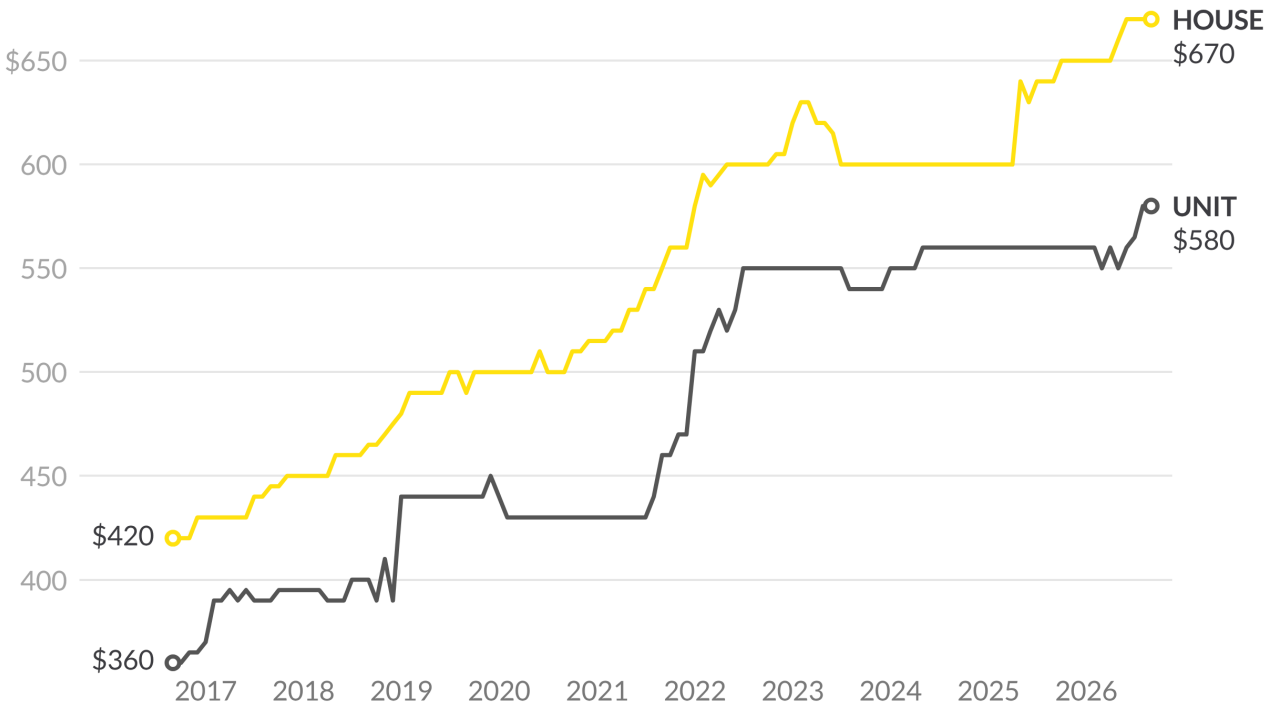

As of September 2026, Macgregor's median house price approximated $830K, recording a solid gain of approximately 4.8% over the last year. This reflects a continued upward trajectory, with an impressive approximately 84% growth since this same month 10 years ago, generally outperforming broader capital city house markets. The median unit price, at approximately $620K, saw a slight decrease of approximately 0.8% annually, yet still represents a more resilient performance compared to the wider capital city unit market. Over the decade, unit prices have achieved significant growth of approximately 85.1% since this same month 10 years ago.

Macgregor rental price growth

Property	Current Price	1Y $ Growth	1Y % Growth	10Y $ Growth	10Y % Growth
HOUSE	$670	+ $30	+4.7%	+ $250	+60%
UNIT	$580	+ $20	+3.6%	+ $220	+61%

Macgregor rental price trend

Source: Neoval

Macgregor's rental market in September 2026 reflects sustained growth. The median weekly house rental rate stands at approximately $670, representing a solid gain of 4.7% from this same month last year, an increase of approximately $30, and a robust 59.5% rise, or approximately $250, from this same month 10 years ago. For units, the median weekly rental rate is approximately $580, marking a 3.6% increase, approximately $20, since this same month last year, and an impressive 61.1% gain, approximately $220, over the past decade. This continued upward trajectory maintains its premium position, coinciding with broader capital city strength.

Macgregor 12M rolling sales count

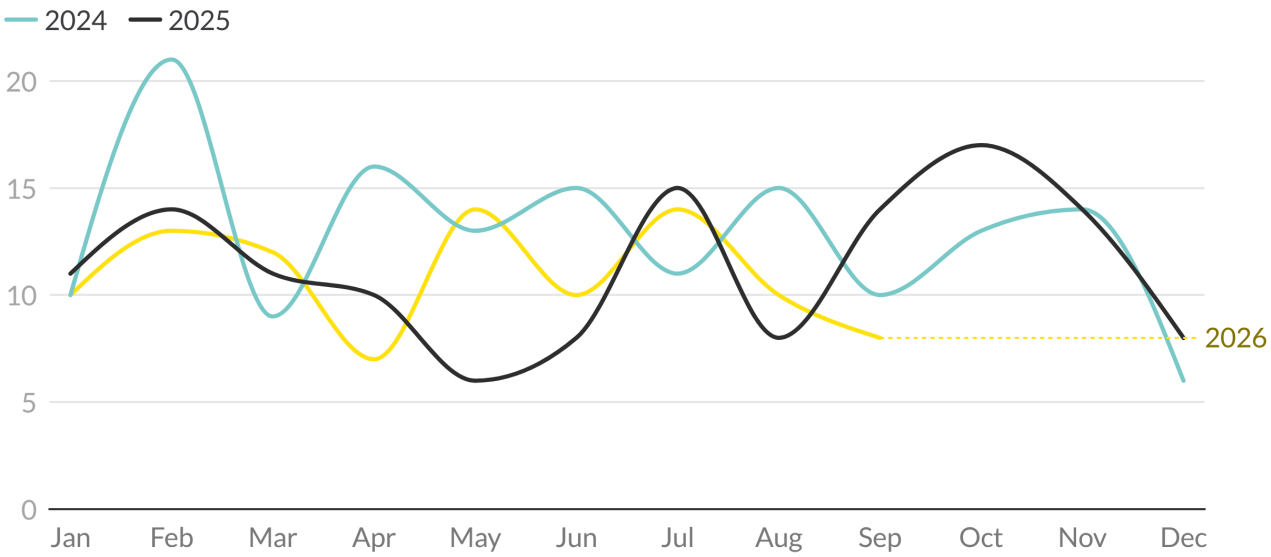

Source: Neoval

In Macgregor, ACT, data as of July 2026 reflects a robust and diverse market. House sales are predominantly concentrated in the $750K to $1M bracket, recording a solid 93 transactions, complemented by 28 sales in the $500K to $750K range and 16 at $1M to $1.5M. This strong activity across mid-to-upper price points represents a sustained market interest. Unit sales firmly anchor in the $500K to $750K segment with 13 transactions, aligning with current capital city trends. A single premium house sale above $5M maintains the suburb's luxury offering, underscoring a broad spectrum of value across property types.

Macgregor monthly volume of new listings over the past 3 years

Number of new monthly listings

Listings from whole market including Ray White.

Source: Neoval

New listings in Macgregor, ACT recorded a modest 20% monthly fall in September, reaching 8 properties. This movement reflects limited vendor activity, with new supply also experiencing a substantial 42.9% annual decline compared to September 2025. Furthermore, listing volumes for the month were 20% lower than two years prior in September 2024. This sustained reduction in new listings represents persistent supply constraints within the market, contrasting with trends seen in broader markets where new listing authorities have shown mixed movements, reinforcing cautious vendor sentiment.

Methodology

Pricing data

Price data is sourced from our research partners at Neoval Research Group, providing comprehensive coverage across all major Australian capital cities and regional markets. Price movements are calculated using median values to ensure accurate representation of typical market performance.

Why median?

The median provides a reliable measure of the "typical" market price by identifying the middle value when all sales are arranged in order. Unlike arithmetic averages, which can be distorted by extreme high or low sales, the median represents the price point where half the properties sold for more and half sold for less. This methodology is particularly valuable when analysing property markets as it reduces the impact of outliers – such as exceptionally expensive waterfront properties or distressed sales – providing a truer reflection of what most buyers and sellers experience in the market. The median effectively captures the centre of the market distribution, making it an ideal measure for tracking genuine price movements over time.
Tasmania exception: Due to licensing restrictions, median data from Neoval is not available for Tasmania. For Tasmanian markets, we utilise the Median Sales AVM Value from Cotality, which represents the median (50th percentile) estimated sales value of all properties based on the hedonic imputation method.

ABS region segmentation and naming convention

Our analysis utilises the Australian Bureau of Statistics (ABS) geographical classification system, employing GCC, SA4, SA3 and SA2 naming conventions as the statistical and computational standard established by the ABS. This hierarchical structure provides a consistent framework for analysing property markets at various geographical scales, from major metropolitan areas down to individual SA2s. The visual representation and practical application of these classifications can be explored through the ABS mapping portal at https://maps.abs.gov.au, which displays the 2021 GCC, SA4, SA3 and SA2 shape files. These are the same shape files and naming conventions used by Neoval in their price modelling computations, ensuring consistency between our data sources and official statistical boundaries.

For comparative analysis purposes, the Sunshine Coast and Gold Coast regions are classified alongside GCC Major City regions. This classification reflects their substantial price growth over recent years and their common comparison with major metropolitan markets. Given their economic significance and market characteristics, these regions are considered Major City regions for the purposes of this analysis.

Listing data

National property listing volumes are sourced from Domain, Australia's leading property portal, providing comprehensive coverage of new property listings across all markets. National listings: presented as monthly counts spanning the last three years (2023-2025) to identify seasonal patterns and year-over-year trends in property supply. Major city and regional listings: current month data is presented with both monthly percentage change (comparison to previous month) and annual percentage change (comparison to same month in previous year) to highlight both short-term fluctuations and longer-term supply trends.

Sales count data

Sales count data by price point is sourced from Australian Property Monitors (APM) and Valuer General records, providing transaction data across all fixed price segments for market segmentation analysis. While filtered for residential properties only, some commercial or rural properties may be incorrectly classified as residential in the source data, potentially affecting data precision.

Temporal framework

All data series are presented on a monthly basis covering the three-year period from 2023 to 2025, enabling identification of seasonal patterns, cyclical trends, and year-over-year comparisons. This timeframe captures the full interest rate cycle from peak rates through to the current cutting cycle, providing context for current market dynamics. All data sources represent substantial market coverage but may not capture 100 per cent of market activity. Price data from Neoval provides broad market representation. Regional variations in data coverage may exist, with metropolitan markets generally providing more comprehensive data.

Commentary Generation Methodology

The market commentary throughout this report was generated using Google's Gemini 2.5 Flash, a state-of-the-art large language model chosen for its exceptional ability to analyse complex datasets and translate them into clear market insights. The model was fed comprehensive data from both our national report along with region specific metrics, enabling it to contextualise local movements within broader market trends. Through multiple iterations of refinement, we optimised the system to provide straightforward, factual descriptions of the data presented in charts and tables, avoiding speculation while highlighting key trends and significant data points. This approach represents our ongoing efforts to deliver consistent, data-driven commentary that accurately reflects underlying market information in accessible language for both property professionals and general readers.
