Weetangera 10 year price trend

Source: Neoval

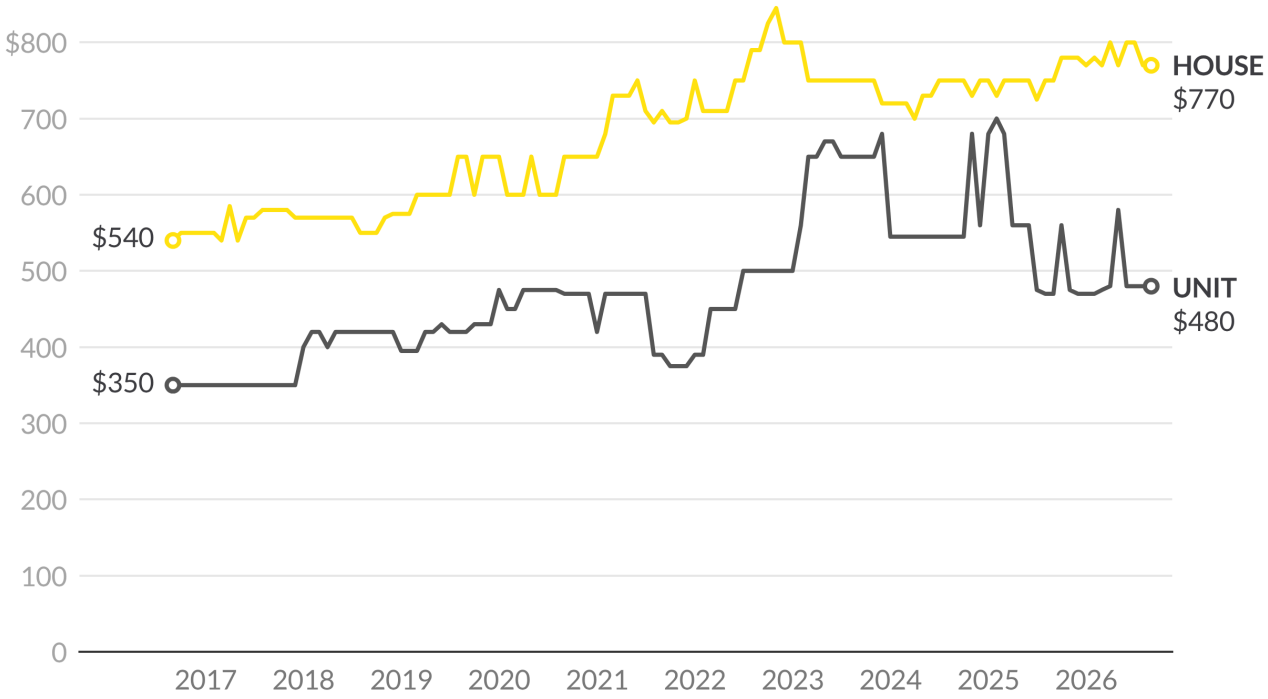

In September 2026, Weetangera's median house price stood at an approximate $1.36M, having recorded a solid 5.4% gain over the past year. Over the decade, this figure represents a substantial 66.3% increase, maintaining its premium position. Meanwhile, the median unit price, at an approximate $790K, saw a decline of 6.5% compared to this same month last year. However, reflecting a robust longer-term trend, unit values have risen by 81.6% over the past 10 years. The house market's continued upward trajectory here contrasts with some broader capital city trends, coinciding with evolving market conditions.

Weetangera rental price growth

Property	Current Price	1Y $ Growth	1Y % Growth	10Y $ Growth	10Y % Growth
HOUSE	$770	+ $20	+2.7%	+ $230	+43%
UNIT	$480	+ $10	+2.1%	+ $130	+37%

Source: Neoval

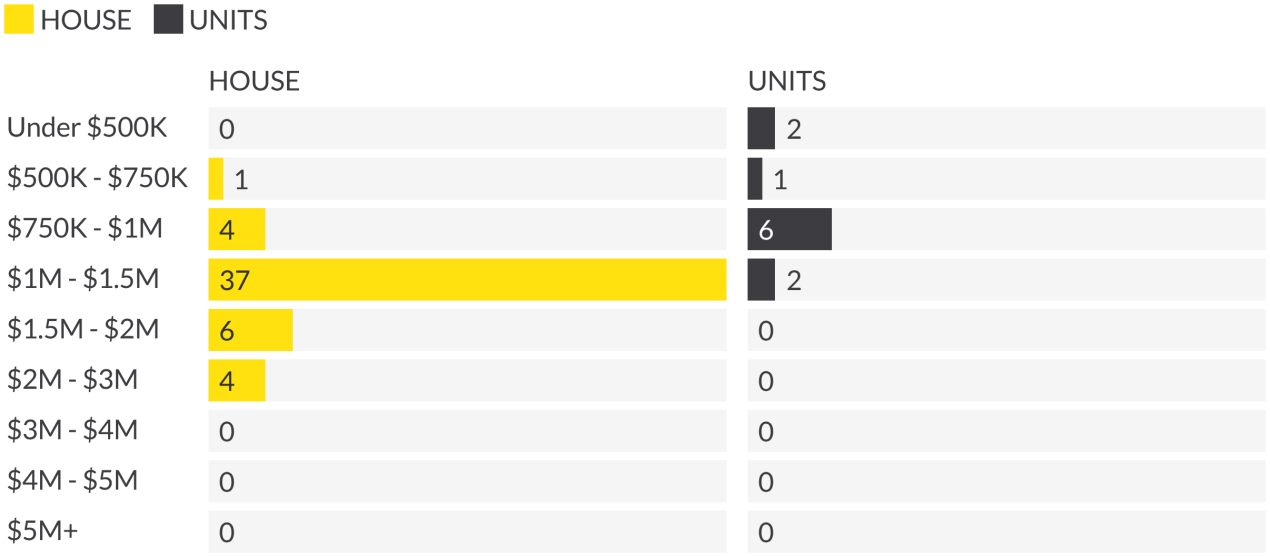

Weetangera rental price trend

Source: Neoval

Weetangera's median weekly house rental rate stands at approximately $770 as of September 2026, reflecting a solid 2.7% gain over the past year and a significant 42.6% growth over the last decade. This performance represents a consistent upward trajectory within the local market. Unit rentals also maintained their strong position, recording a median of approximately $480 per week, coinciding with a 2.1% increase annually and a substantial 37.1% rise since the same month ten years ago. These figures underscore the robust demand for rental properties in the area.

Weetangera 12M rolling sales count

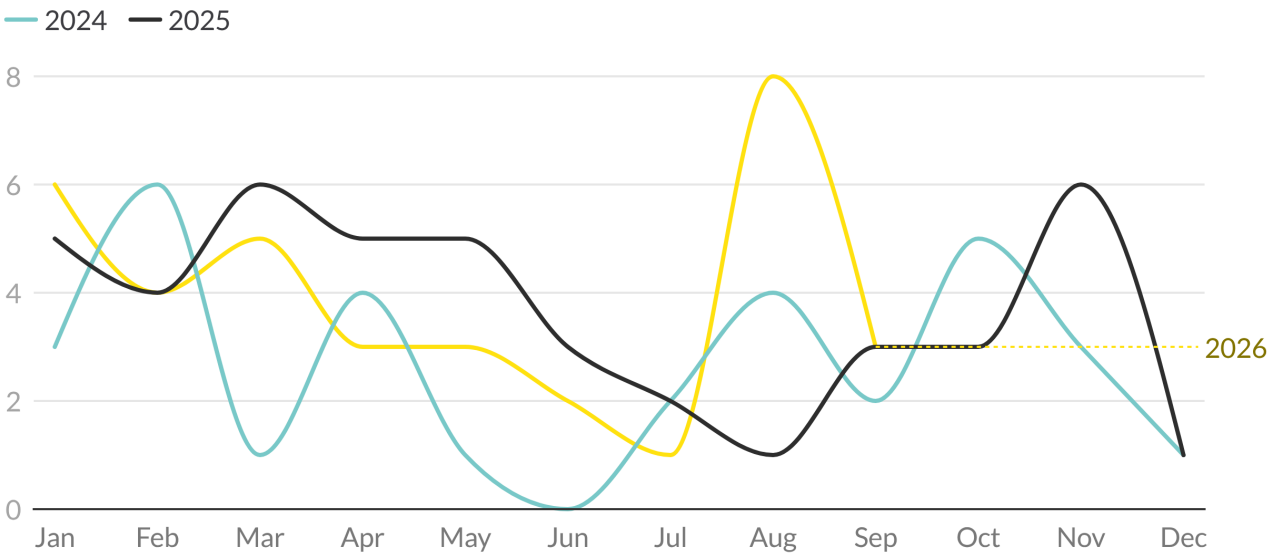

Source: Neoval

Weetangera, ACT's property landscape as of July 2026 reflects a robust premium market, with house sales predominantly concentrated between $1.0M and $1.5M, accounting for 37 transactions. A notable spread of activity extends into higher tiers, with 6 sales from $1.5M to $2.0M and 4 sales between $2.0M and $3.0M, maintaining its premium position relative to broader capital city trends. Unit sales primarily occurred in the $750K to $1.0M range with 6 transactions, providing a more accessible entry point, yet still demonstrating healthy demand. The lower price bands saw limited house activity, underscoring the suburb's established market profile.

Weetangera monthly volume of new listings over the past 3 years

Number of new monthly listings

Listings from whole market including Ray White.

Source: Neoval

New listings in September 2026 recorded a sharp 62.5% monthly decline, reaching 3 properties in Weetangera. This volume was unchanged compared to September 2025, yet represents a 50% gain from the two properties listed in September 2024. This recent downturn reflects a period of limited vendor activity, coinciding with broader trends of tighter supply observed across various markets, and reinforces persistent supply constraints locally.

Methodology

Pricing data

Price data is sourced from our research partners at Neoval Research Group, providing comprehensive coverage across all major Australian capital cities and regional markets. Price movements are calculated using median values to ensure accurate representation of typical market performance.

Why median?

The median provides a reliable measure of the "typical" market price by identifying the middle value when all sales are arranged in order. Unlike arithmetic averages, which can be distorted by extreme high or low sales, the median represents the price point where half the properties sold for more and half sold for less. This methodology is particularly valuable when analysing property markets as it reduces the impact of outliers – such as exceptionally expensive waterfront properties or distressed sales – providing a truer reflection of what most buyers and sellers experience in the market. The median effectively captures the centre of the market distribution, making it an ideal measure for tracking genuine price movements over time.
Tasmania exception: Due to licensing restrictions, median data from Neoval is not available for Tasmania. For Tasmanian markets, we utilise the Median Sales AVM Value from Cotality, which represents the median (50th percentile) estimated sales value of all properties based on the hedonic imputation method.

ABS region segmentation and naming convention

Our analysis utilises the Australian Bureau of Statistics (ABS) geographical classification system, employing GCC, SA4, SA3 and SA2 naming conventions as the statistical and computational standard established by the ABS. This hierarchical structure provides a consistent framework for analysing property markets at various geographical scales, from major metropolitan areas down to individual SA2s. The visual representation and practical application of these classifications can be explored through the ABS mapping portal at https://maps.abs.gov.au, which displays the 2021 GCC, SA4, SA3 and SA2 shape files. These are the same shape files and naming conventions used by Neoval in their price modelling computations, ensuring consistency between our data sources and official statistical boundaries.

For comparative analysis purposes, the Sunshine Coast and Gold Coast regions are classified alongside GCC Major City regions. This classification reflects their substantial price growth over recent years and their common comparison with major metropolitan markets. Given their economic significance and market characteristics, these regions are considered Major City regions for the purposes of this analysis.

Listing data

National property listing volumes are sourced from Domain, Australia's leading property portal, providing comprehensive coverage of new property listings across all markets. National listings: presented as monthly counts spanning the last three years (2023-2025) to identify seasonal patterns and year-over-year trends in property supply. Major city and regional listings: current month data is presented with both monthly percentage change (comparison to previous month) and annual percentage change (comparison to same month in previous year) to highlight both short-term fluctuations and longer-term supply trends.

Sales count data

Sales count data by price point is sourced from Australian Property Monitors (APM) and Valuer General records, providing transaction data across all fixed price segments for market segmentation analysis. While filtered for residential properties only, some commercial or rural properties may be incorrectly classified as residential in the source data, potentially affecting data precision.

Temporal framework

All data series are presented on a monthly basis covering the three-year period from 2023 to 2025, enabling identification of seasonal patterns, cyclical trends, and year-over-year comparisons. This timeframe captures the full interest rate cycle from peak rates through to the current cutting cycle, providing context for current market dynamics. All data sources represent substantial market coverage but may not capture 100 per cent of market activity. Price data from Neoval provides broad market representation. Regional variations in data coverage may exist, with metropolitan markets generally providing more comprehensive data.

Commentary Generation Methodology

The market commentary throughout this report was generated using Google's Gemini 2.5 Flash, a state-of-the-art large language model chosen for its exceptional ability to analyse complex datasets and translate them into clear market insights. The model was fed comprehensive data from both our national report along with region specific metrics, enabling it to contextualise local movements within broader market trends. Through multiple iterations of refinement, we optimised the system to provide straightforward, factual descriptions of the data presented in charts and tables, avoiding speculation while highlighting key trends and significant data points. This approach represents our ongoing efforts to deliver consistent, data-driven commentary that accurately reflects underlying market information in accessible language for both property professionals and general readers.
