Crace 10 year price trend

Source: Neoval

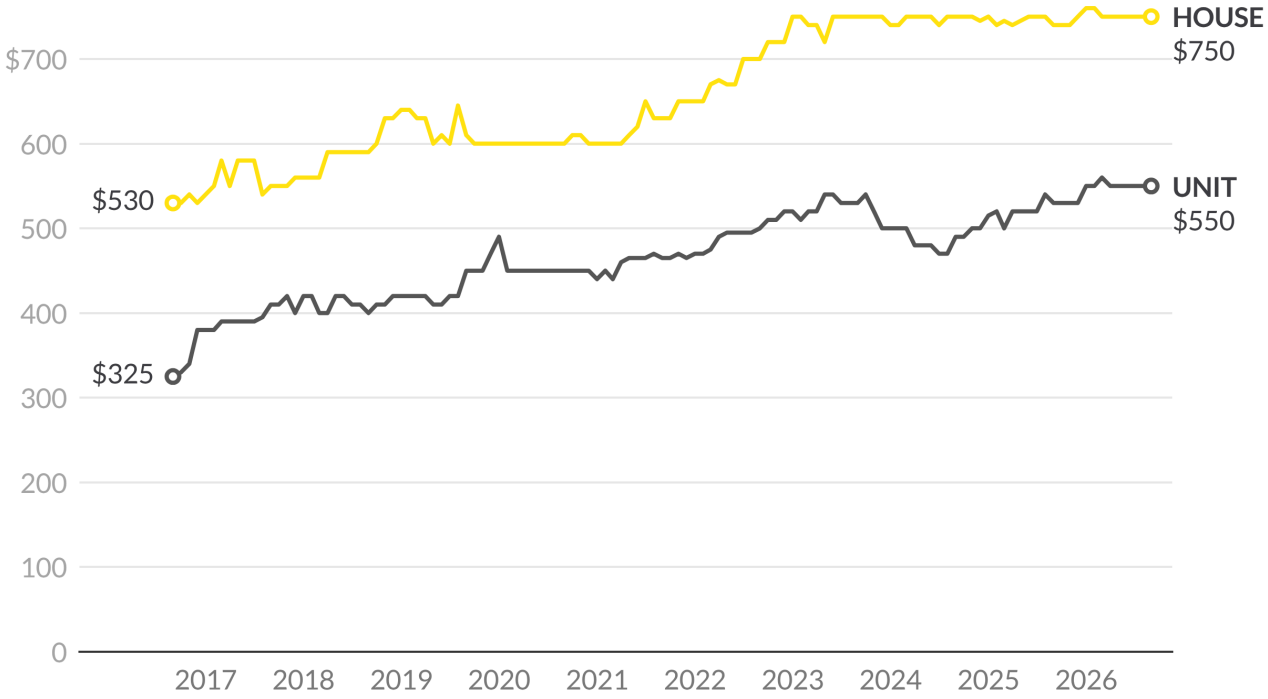

In Crace, the median house price stands at approximately $940K in September 2026, marking a 17.3% decline compared to this same month last year, though still reflecting a solid 36.5% gain over this same month 10 years ago. Meanwhile, unit prices have recorded a significant upward trajectory, reaching an approximate median of $510K. This represents a robust 27.8% increase from this same month last year and a substantial 71.2% rise over the decade. This strong unit growth has occurred alongside shifting market dynamics, with unit performance notably outperforming broader capital city trends in the short term.

Crace rental price growth

Property	Current Price	1Y $ Growth	1Y % Growth	10Y $ Growth	10Y % Growth
HOUSE	$750	+ $10	+1.4%	+ $220	+42%
UNIT	$550	+ $20	+3.8%	+ $225	+69%

Source: Neoval

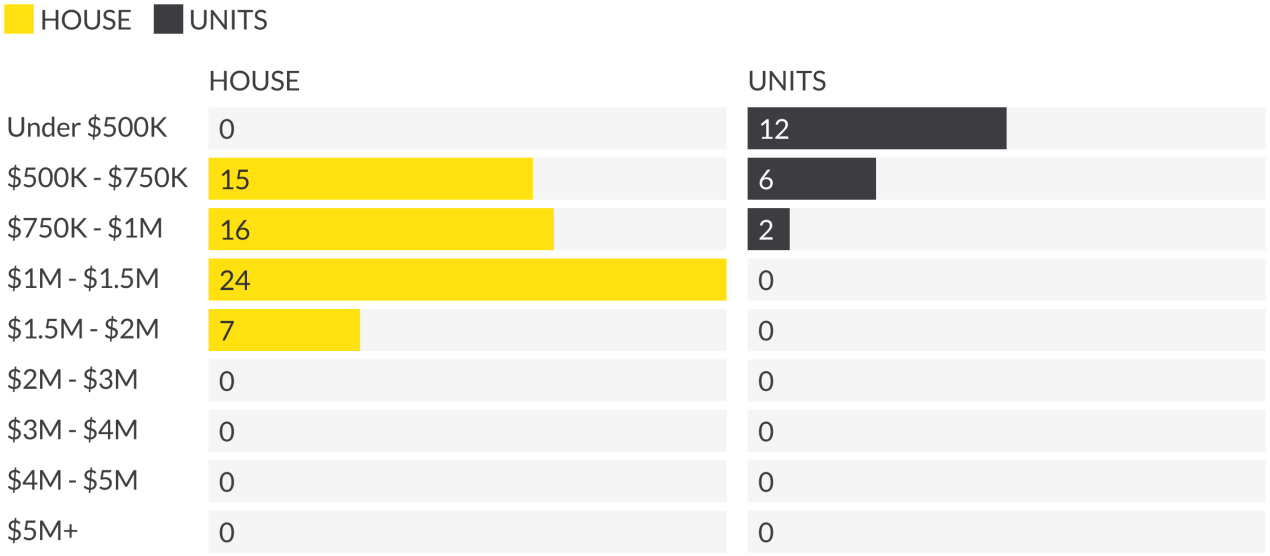

Crace rental price trend

Source: Neoval

For Crace, ACT, house median weekly rental rates, approximated at $750, recorded a solid gain of 1.4% compared to this same month last year, having continued its upward trajectory by an impressive 41.5% over the past decade. This performance reflects a steady local demand. Unit median weekly rental rates, approximated at $550, experienced stronger annual growth, climbing 3.8% from this same month last year, and an outstanding 69.2% over the last ten years. This stronger long-term unit performance represents varied market dynamics within the local rental landscape.

Crace 12M rolling sales count

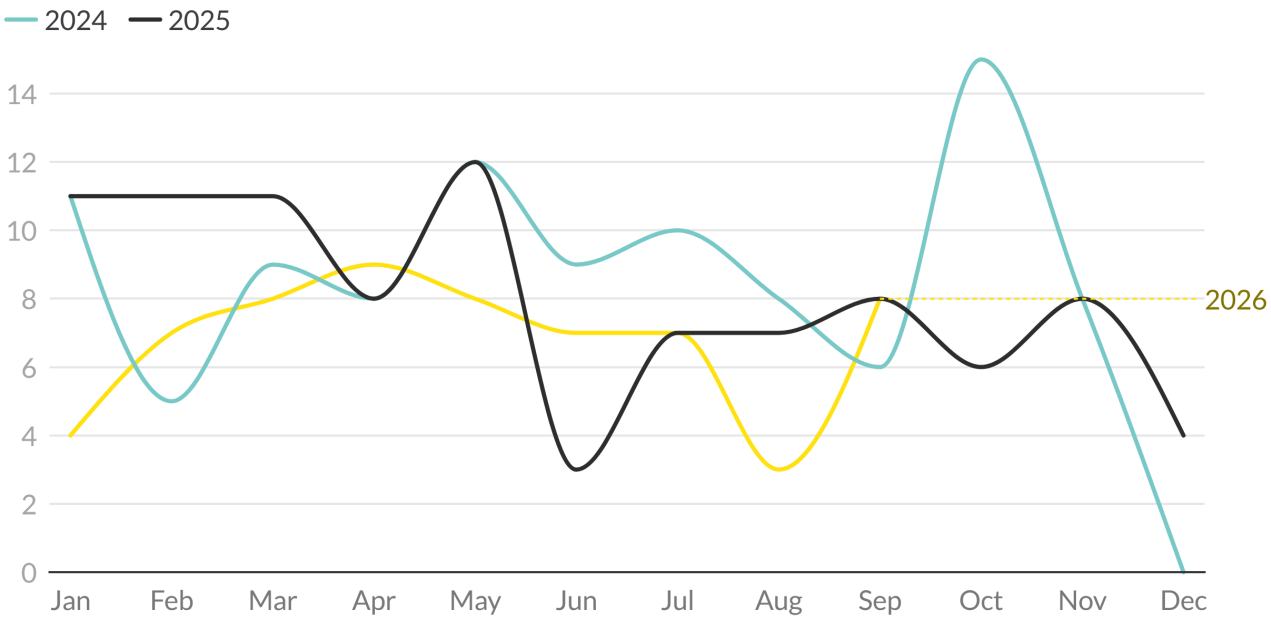

Source: Neoval

Crace, ACT, up to July 2026, recorded a distinct sales distribution across price ranges, reflecting a robust market for diverse property types. House sales were predominantly concentrated from $500K through to $1.5M, with the most significant activity observed in the $1M-$1.5M bracket, representing a strong mid-tier and premium segment. Unit sales, in contrast, largely anchored the affordability spectrum, with a notable 12 sales occurring under $500K, demonstrating accessible entry points. Minimal unit activity was seen above $750K, while houses maintained their premium position, with 7 sales in the $1.5M-$2M range, coinciding with broader capital city trends.

Crace monthly volume of new listings over the past 3 years

Number of new monthly listings

Listings from whole market including Ray White.

Source: Neoval

New listings in Crace, ACT recorded a strong 166.7% monthly gain in September 2026, reaching 8 properties. This rebound from August's notably low count reflects a consistent level of vendor activity annually, holding flat compared to September 2025. Furthermore, new supply has demonstrated a solid 33.3% increase from September 2024, representing more robust localised dynamics for properties entering the market than observed in broader capital city trends. This recent trajectory in new stock contrasts with the general easing in listing authorities across wider markets, reinforcing a distinct supply pattern.

Methodology

Pricing data

Price data is sourced from our research partners at Neoval Research Group, providing comprehensive coverage across all major Australian capital cities and regional markets. Price movements are calculated using median values to ensure accurate representation of typical market performance.

Why median?

The median provides a reliable measure of the "typical" market price by identifying the middle value when all sales are arranged in order. Unlike arithmetic averages, which can be distorted by extreme high or low sales, the median represents the price point where half the properties sold for more and half sold for less. This methodology is particularly valuable when analysing property markets as it reduces the impact of outliers – such as exceptionally expensive waterfront properties or distressed sales – providing a truer reflection of what most buyers and sellers experience in the market. The median effectively captures the centre of the market distribution, making it an ideal measure for tracking genuine price movements over time.
Tasmania exception: Due to licensing restrictions, median data from Neoval is not available for Tasmania. For Tasmanian markets, we utilise the Median Sales AVM Value from Cotality, which represents the median (50th percentile) estimated sales value of all properties based on the hedonic imputation method.

ABS region segmentation and naming convention

Our analysis utilises the Australian Bureau of Statistics (ABS) geographical classification system, employing GCC, SA4, SA3 and SA2 naming conventions as the statistical and computational standard established by the ABS. This hierarchical structure provides a consistent framework for analysing property markets at various geographical scales, from major metropolitan areas down to individual SA2s. The visual representation and practical application of these classifications can be explored through the ABS mapping portal at https://maps.abs.gov.au, which displays the 2021 GCC, SA4, SA3 and SA2 shape files. These are the same shape files and naming conventions used by Neoval in their price modelling computations, ensuring consistency between our data sources and official statistical boundaries.

For comparative analysis purposes, the Sunshine Coast and Gold Coast regions are classified alongside GCC Major City regions. This classification reflects their substantial price growth over recent years and their common comparison with major metropolitan markets. Given their economic significance and market characteristics, these regions are considered Major City regions for the purposes of this analysis.

Listing data

National property listing volumes are sourced from Domain, Australia's leading property portal, providing comprehensive coverage of new property listings across all markets. National listings: presented as monthly counts spanning the last three years (2023-2025) to identify seasonal patterns and year-over-year trends in property supply. Major city and regional listings: current month data is presented with both monthly percentage change (comparison to previous month) and annual percentage change (comparison to same month in previous year) to highlight both short-term fluctuations and longer-term supply trends.

Sales count data

Sales count data by price point is sourced from Australian Property Monitors (APM) and Valuer General records, providing transaction data across all fixed price segments for market segmentation analysis. While filtered for residential properties only, some commercial or rural properties may be incorrectly classified as residential in the source data, potentially affecting data precision.

Temporal framework

All data series are presented on a monthly basis covering the three-year period from 2023 to 2025, enabling identification of seasonal patterns, cyclical trends, and year-over-year comparisons. This timeframe captures the full interest rate cycle from peak rates through to the current cutting cycle, providing context for current market dynamics. All data sources represent substantial market coverage but may not capture 100 per cent of market activity. Price data from Neoval provides broad market representation. Regional variations in data coverage may exist, with metropolitan markets generally providing more comprehensive data.

Commentary Generation Methodology

The market commentary throughout this report was generated using Google's Gemini 2.5 Flash, a state-of-the-art large language model chosen for its exceptional ability to analyse complex datasets and translate them into clear market insights. The model was fed comprehensive data from both our national report along with region specific metrics, enabling it to contextualise local movements within broader market trends. Through multiple iterations of refinement, we optimised the system to provide straightforward, factual descriptions of the data presented in charts and tables, avoiding speculation while highlighting key trends and significant data points. This approach represents our ongoing efforts to deliver consistent, data-driven commentary that accurately reflects underlying market information in accessible language for both property professionals and general readers.
