Chisholm 10 year price trend

Source: Neoval

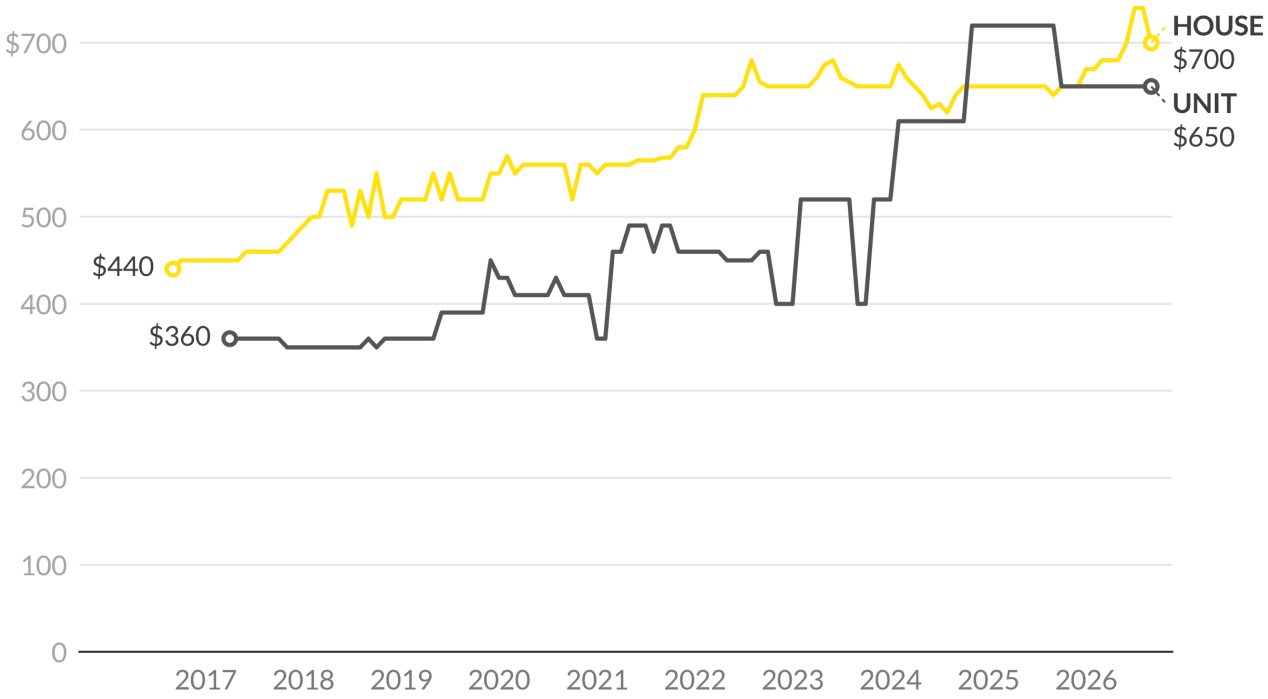

As of September 2026, Chisholm's median house price stood at approximately $920K, representing a solid 6.1% gain over this same month last year, an increase of $53K. Over the past decade, house prices have experienced a significant upward trajectory, rising by $448K or 95.3%. Meanwhile, the median unit price was approximately $580K, reflecting a substantial 22.1% decline from this same month last year, a decrease of $165K. Despite this, units have seen a $160K appreciation, or 38.1%, over the past decade. All figures are approximations. This mixed performance has occurred alongside evolving market conditions, with houses demonstrating stronger growth than broader capital city trends over the long term.

Chisholm rental price growth

Property	Current Price	1Y $ Growth	1Y % Growth	10Y $ Growth	10Y % Growth
HOUSE	$700	+ $60	+9.4%	+ $260	+59%

Source: Neoval

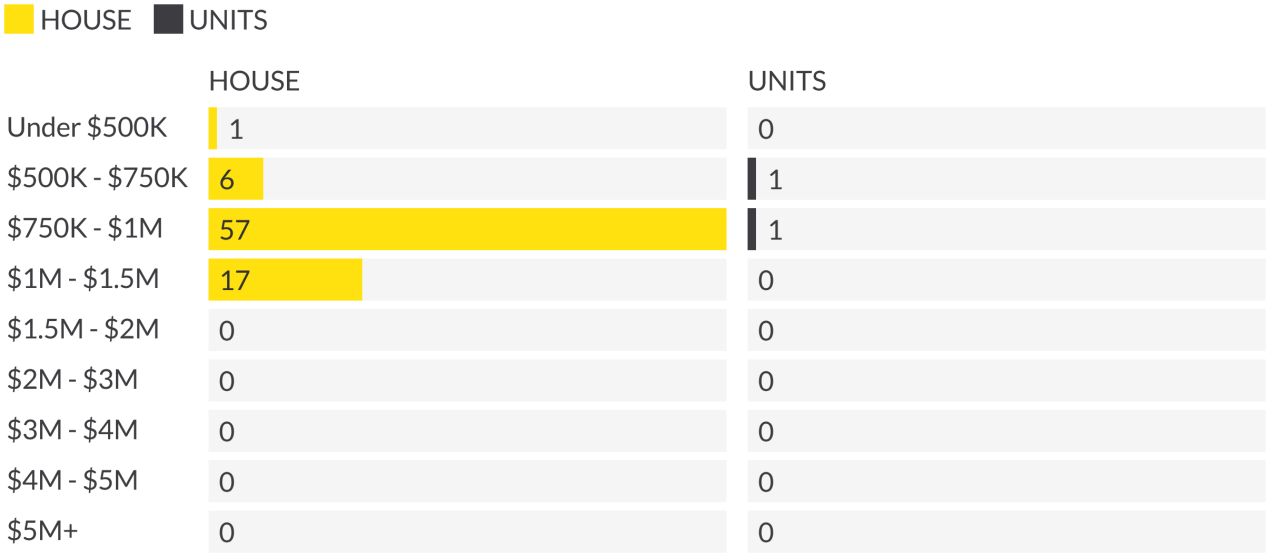

Chisholm rental price trend

Source: Neoval

Chisholm's house rental market has continued its upward trajectory, with the median weekly rental rate recorded at approximately $700. This reflects a solid gain of 9.4% over the last year, coinciding with broader strength in the Canberra market. Looking back a decade, median house rents have surged by an impressive 59.1% since the same month 10 years ago. Unit rental data for the suburb is not currently available, representing potentially lower transaction volumes for this property type in the area.

Chisholm 12M rolling sales count

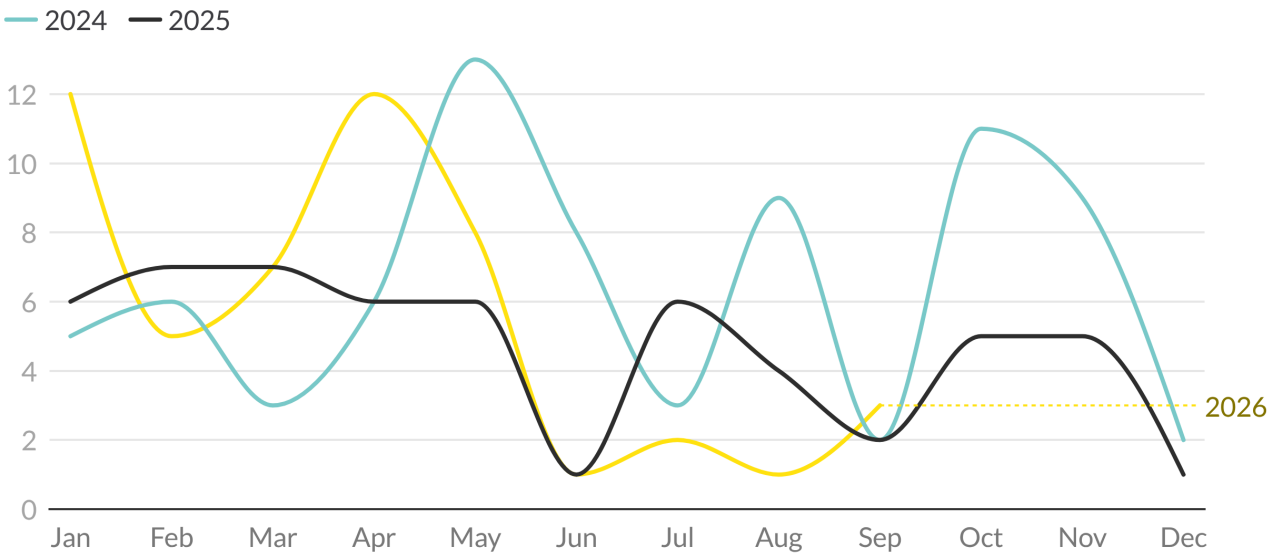

Source: Neoval

Chisholm's property market up to July 2026 reflects a robust concentration in the mid-tier house segment. The majority of house sales, a solid 57, occurred within the $750K - $1M price bracket, with an additional 17 sales registered between $1M and $1.5M. This strong performance in the $750K - $1.5M range represents the core of housing activity, while sales under $500K were minimal. Activity above $1.5M was absent, representing a defined market ceiling. Unit sales remained limited, with just two transactions recorded between $500K and $1M. This distribution highlights a well-defined mid-to-upper-mid-tier market for houses, continuing its solid performance relative to broader capital city trends.

Chisholm monthly volume of new listings over the past 3 years

Number of new monthly listings

Listings from whole market including Ray White.

Source: Neoval

New listings in September 2026 recorded a strong 200% monthly gain in Chisholm, reaching 3 properties. This substantial increase also reflects a robust 50% annual rise compared to September 2025, and a 50% increase from the volume recorded in September 2024. This growth represents a notable uptick in vendor activity, contrasting with earlier supply constraints observed across some broader markets. The increase has occurred alongside a general softening in capital city trends, maintaining Chisholm's distinct market dynamics.

Methodology

Pricing data

Price data is sourced from our research partners at Neoval Research Group, providing comprehensive coverage across all major Australian capital cities and regional markets. Price movements are calculated using median values to ensure accurate representation of typical market performance.

Why median?

The median provides a reliable measure of the "typical" market price by identifying the middle value when all sales are arranged in order. Unlike arithmetic averages, which can be distorted by extreme high or low sales, the median represents the price point where half the properties sold for more and half sold for less. This methodology is particularly valuable when analysing property markets as it reduces the impact of outliers – such as exceptionally expensive waterfront properties or distressed sales – providing a truer reflection of what most buyers and sellers experience in the market. The median effectively captures the centre of the market distribution, making it an ideal measure for tracking genuine price movements over time.
Tasmania exception: Due to licensing restrictions, median data from Neoval is not available for Tasmania. For Tasmanian markets, we utilise the Median Sales AVM Value from Cotality, which represents the median (50th percentile) estimated sales value of all properties based on the hedonic imputation method.

ABS region segmentation and naming convention

Our analysis utilises the Australian Bureau of Statistics (ABS) geographical classification system, employing GCC, SA4, SA3 and SA2 naming conventions as the statistical and computational standard established by the ABS. This hierarchical structure provides a consistent framework for analysing property markets at various geographical scales, from major metropolitan areas down to individual SA2s. The visual representation and practical application of these classifications can be explored through the ABS mapping portal at https://maps.abs.gov.au, which displays the 2021 GCC, SA4, SA3 and SA2 shape files. These are the same shape files and naming conventions used by Neoval in their price modelling computations, ensuring consistency between our data sources and official statistical boundaries.

For comparative analysis purposes, the Sunshine Coast and Gold Coast regions are classified alongside GCC Major City regions. This classification reflects their substantial price growth over recent years and their common comparison with major metropolitan markets. Given their economic significance and market characteristics, these regions are considered Major City regions for the purposes of this analysis.

Listing data

National property listing volumes are sourced from Domain, Australia's leading property portal, providing comprehensive coverage of new property listings across all markets. National listings: presented as monthly counts spanning the last three years (2023-2025) to identify seasonal patterns and year-over-year trends in property supply. Major city and regional listings: current month data is presented with both monthly percentage change (comparison to previous month) and annual percentage change (comparison to same month in previous year) to highlight both short-term fluctuations and longer-term supply trends.

Sales count data

Sales count data by price point is sourced from Australian Property Monitors (APM) and Valuer General records, providing transaction data across all fixed price segments for market segmentation analysis. While filtered for residential properties only, some commercial or rural properties may be incorrectly classified as residential in the source data, potentially affecting data precision.

Temporal framework

All data series are presented on a monthly basis covering the three-year period from 2023 to 2025, enabling identification of seasonal patterns, cyclical trends, and year-over-year comparisons. This timeframe captures the full interest rate cycle from peak rates through to the current cutting cycle, providing context for current market dynamics. All data sources represent substantial market coverage but may not capture 100 per cent of market activity. Price data from Neoval provides broad market representation. Regional variations in data coverage may exist, with metropolitan markets generally providing more comprehensive data.

Commentary Generation Methodology

The market commentary throughout this report was generated using Google's Gemini 2.5 Flash, a state-of-the-art large language model chosen for its exceptional ability to analyse complex datasets and translate them into clear market insights. The model was fed comprehensive data from both our national report along with region specific metrics, enabling it to contextualise local movements within broader market trends. Through multiple iterations of refinement, we optimised the system to provide straightforward, factual descriptions of the data presented in charts and tables, avoiding speculation while highlighting key trends and significant data points. This approach represents our ongoing efforts to deliver consistent, data-driven commentary that accurately reflects underlying market information in accessible language for both property professionals and general readers.
