Fadden 10 year price trend

Source: Neoval

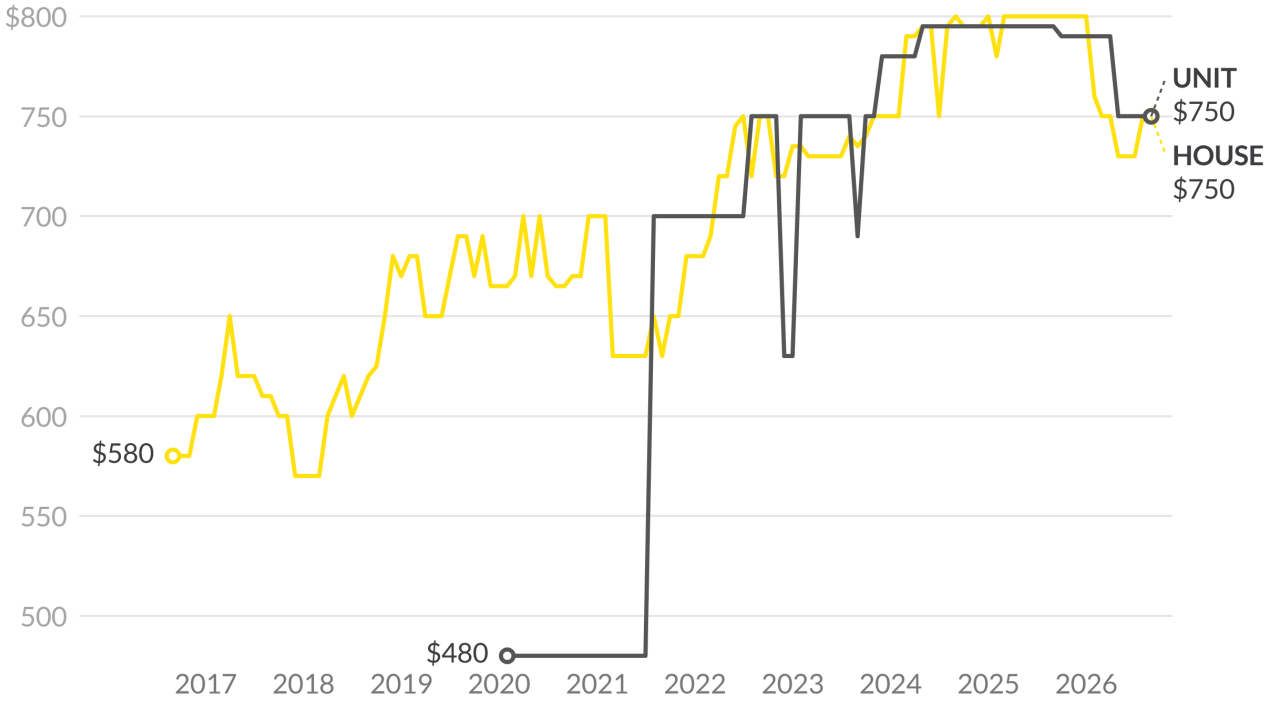

In Fadden, the median house price in September 2026 maintained its premium position at an approximate $1.2M, recording a solid gain of 4.8% over the last year and an impressive 76.5% over the past decade, representing an approximate $55K and $520K increase respectively. The unit market continued its upward trajectory, with median prices reaching approximately $1.0M, a robust 9.3% increase since this same month last year and a 48.1% rise from 10 years ago, reflecting approximate gains of $85K and $325K. This strong local performance notably outperforming broader capital city trends over the past year.

Fadden rental price growth

Property	Current Price	1Y $ Growth	1Y % Growth	10Y $ Growth	10Y % Growth
HOUSE	$750	− $50	-6.3%	+ $170	+29%
UNIT	$750	− $45	-5.7%	+ $270	+56%

Source: Neoval

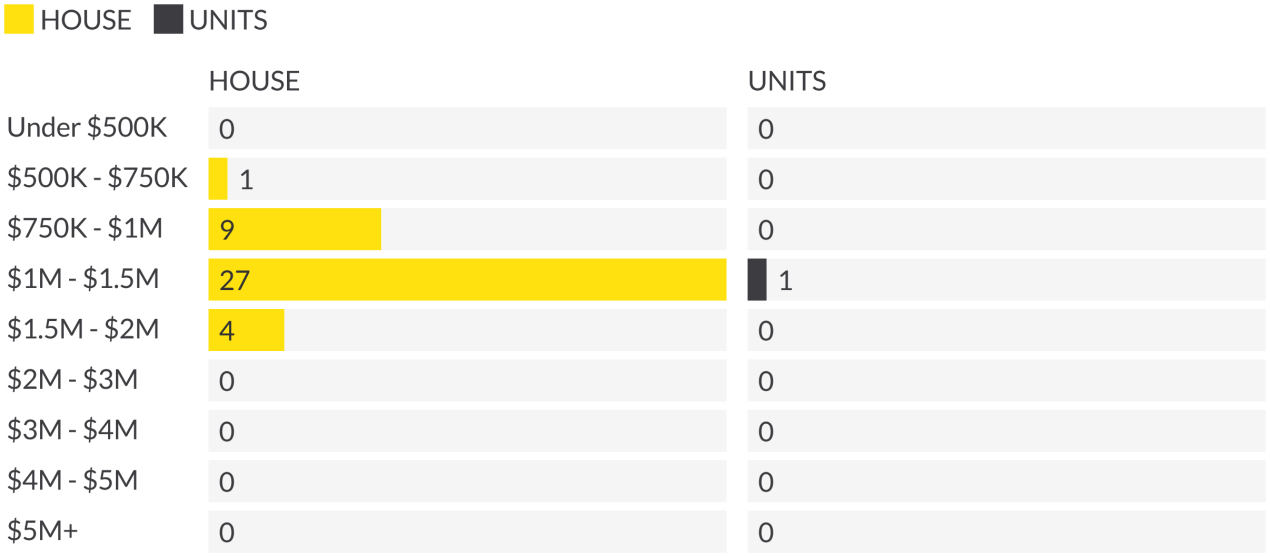

Fadden rental price trend

Source: Neoval

Fadden's median weekly rental rate for houses is approximately $750, reflecting a 6.3% decline since this same month last year. However, a decade-long perspective shows a solid 29.3% gain, with rates increasing by an approximate $170. Unit rentals also currently stand at around $750 per week, experiencing a 5.7% drop year-on-year, or approximately $45. Despite this recent softening, unit median weekly rates have seen substantial growth of 56.3% over the past 10 years, an increase of roughly $270. These recent annual adjustments in both property types represent a softer performance compared to broader market trends.

Fadden 12M rolling sales count

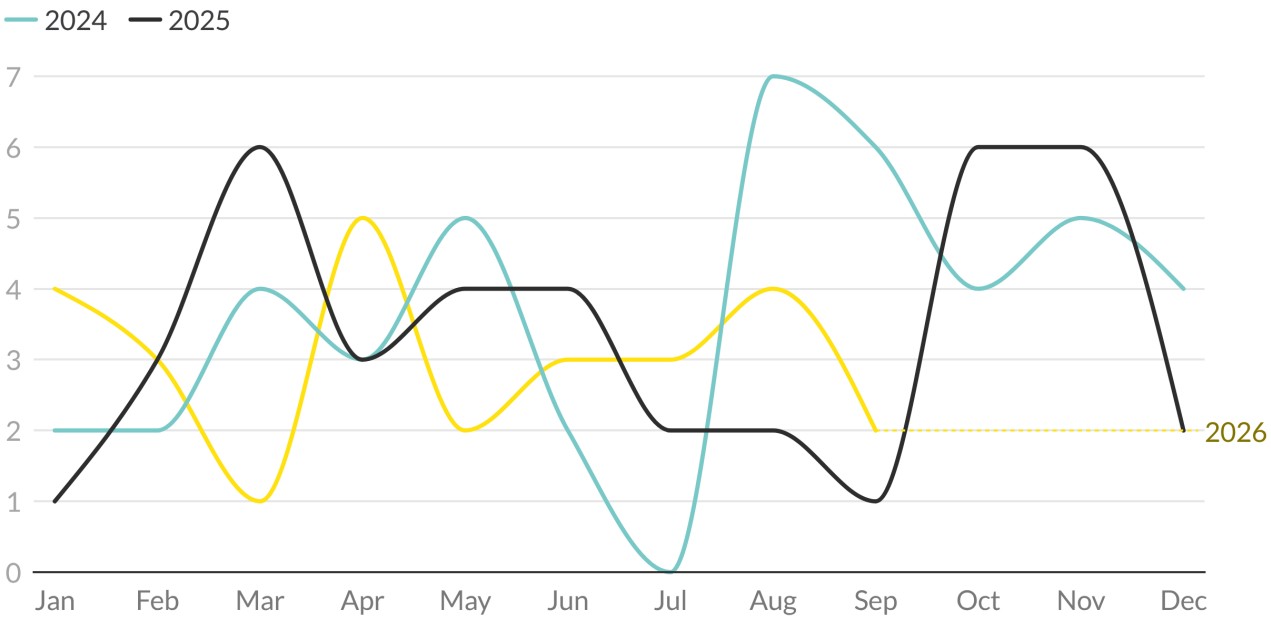

Source: Neoval

Fadden, ACT, for the 12 months ending July 2026, reflects a robust housing market where sales activity is notably concentrated within specific price segments. House transactions largely occurred between $750K and $1.5M, with the $1M-$1.5M bracket recording 27 sales, establishing it as the primary mid-tier and upper-mid tier focus. A solid gain of four sales in the $1.5M-$2M range represents the luxury end, while only one house was sold within the more accessible $500K-$750K price point. Unit sales remained minimal, with just one transaction above $1M, reflecting their premium presence in the region.

Fadden monthly volume of new listings over the past 3 years

Number of new monthly listings

Listings from whole market including Ray White.

Source: Neoval

New listings in Fadden, ACT in September 2026 recorded a significant 50% monthly decrease from August, reaching 2 properties. This contrasts sharply with a substantial 100% annual increase compared to September 2025, which observed only one listing. However, current supply remains markedly below the 6 listings recorded in September 2024, reflecting persistent supply constraints. This reinforces limited vendor activity compared to historical trends, contrasting with stronger growth observed across some capital city markets. The subdued monthly activity, coinciding with wider market adjustments, highlights the area's unique supply dynamics.

Methodology

Pricing data

Price data is sourced from our research partners at Neoval Research Group, providing comprehensive coverage across all major Australian capital cities and regional markets. Price movements are calculated using median values to ensure accurate representation of typical market performance.

Why median?

The median provides a reliable measure of the "typical" market price by identifying the middle value when all sales are arranged in order. Unlike arithmetic averages, which can be distorted by extreme high or low sales, the median represents the price point where half the properties sold for more and half sold for less. This methodology is particularly valuable when analysing property markets as it reduces the impact of outliers – such as exceptionally expensive waterfront properties or distressed sales – providing a truer reflection of what most buyers and sellers experience in the market. The median effectively captures the centre of the market distribution, making it an ideal measure for tracking genuine price movements over time.
Tasmania exception: Due to licensing restrictions, median data from Neoval is not available for Tasmania. For Tasmanian markets, we utilise the Median Sales AVM Value from Cotality, which represents the median (50th percentile) estimated sales value of all properties based on the hedonic imputation method.

ABS region segmentation and naming convention

Our analysis utilises the Australian Bureau of Statistics (ABS) geographical classification system, employing GCC, SA4, SA3 and SA2 naming conventions as the statistical and computational standard established by the ABS. This hierarchical structure provides a consistent framework for analysing property markets at various geographical scales, from major metropolitan areas down to individual SA2s. The visual representation and practical application of these classifications can be explored through the ABS mapping portal at https://maps.abs.gov.au, which displays the 2021 GCC, SA4, SA3 and SA2 shape files. These are the same shape files and naming conventions used by Neoval in their price modelling computations, ensuring consistency between our data sources and official statistical boundaries.

For comparative analysis purposes, the Sunshine Coast and Gold Coast regions are classified alongside GCC Major City regions. This classification reflects their substantial price growth over recent years and their common comparison with major metropolitan markets. Given their economic significance and market characteristics, these regions are considered Major City regions for the purposes of this analysis.

Listing data

National property listing volumes are sourced from Domain, Australia's leading property portal, providing comprehensive coverage of new property listings across all markets. National listings: presented as monthly counts spanning the last three years (2023-2025) to identify seasonal patterns and year-over-year trends in property supply. Major city and regional listings: current month data is presented with both monthly percentage change (comparison to previous month) and annual percentage change (comparison to same month in previous year) to highlight both short-term fluctuations and longer-term supply trends.

Sales count data

Sales count data by price point is sourced from Australian Property Monitors (APM) and Valuer General records, providing transaction data across all fixed price segments for market segmentation analysis. While filtered for residential properties only, some commercial or rural properties may be incorrectly classified as residential in the source data, potentially affecting data precision.

Temporal framework

All data series are presented on a monthly basis covering the three-year period from 2023 to 2025, enabling identification of seasonal patterns, cyclical trends, and year-over-year comparisons. This timeframe captures the full interest rate cycle from peak rates through to the current cutting cycle, providing context for current market dynamics. All data sources represent substantial market coverage but may not capture 100 per cent of market activity. Price data from Neoval provides broad market representation. Regional variations in data coverage may exist, with metropolitan markets generally providing more comprehensive data.

Commentary Generation Methodology

The market commentary throughout this report was generated using Google's Gemini 2.5 Flash, a state-of-the-art large language model chosen for its exceptional ability to analyse complex datasets and translate them into clear market insights. The model was fed comprehensive data from both our national report along with region specific metrics, enabling it to contextualise local movements within broader market trends. Through multiple iterations of refinement, we optimised the system to provide straightforward, factual descriptions of the data presented in charts and tables, avoiding speculation while highlighting key trends and significant data points. This approach represents our ongoing efforts to deliver consistent, data-driven commentary that accurately reflects underlying market information in accessible language for both property professionals and general readers.
