Isabella Plains 10 year price trend

Source: Neoval

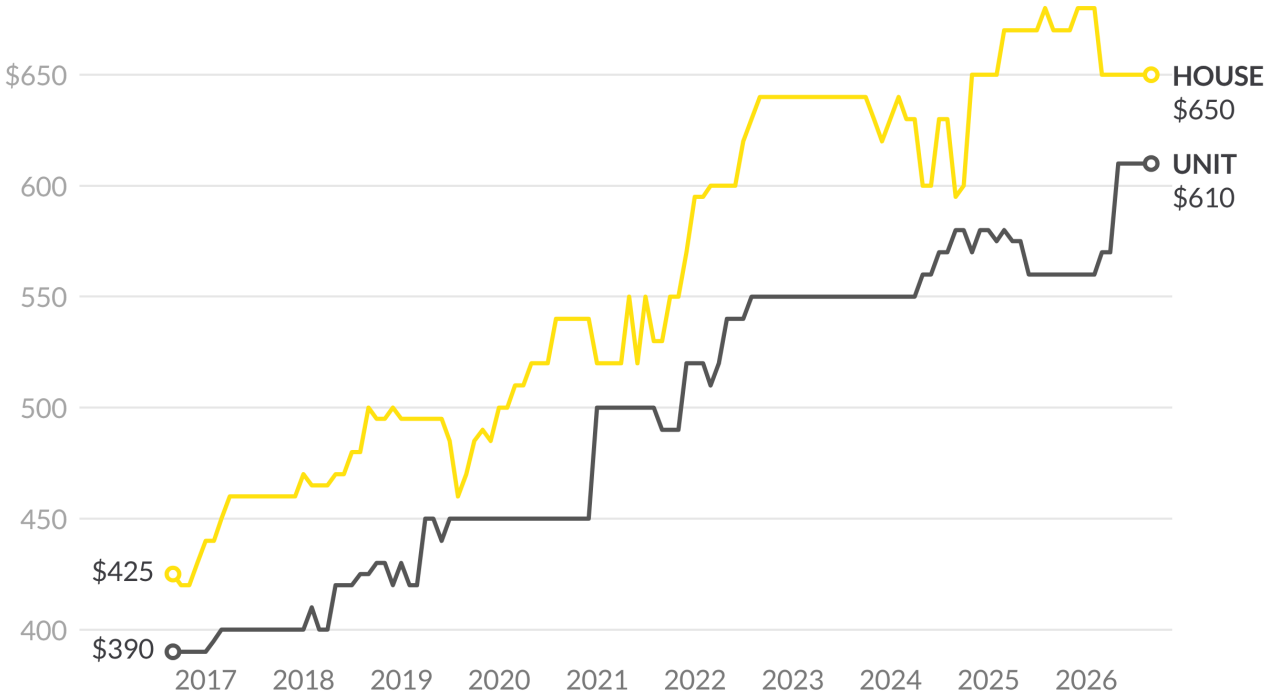

The median house price in Isabella Plains continued its upward trajectory, reaching approximately $900K in September 2026. This reflects a solid 7.3% gain over the past year, with values having surged an impressive 87.7% since this same month 10 years ago. Unit prices also recorded robust performance, with the median standing at approximately $670K, representing a 6.7% increase from this same month last year, and a significant 79.4% climb over the past decade. This growth in the local market has occurred alongside stronger trends than observed in many broader capital city markets.

Isabella Plains rental price growth

Property	Current Price	1Y $ Growth	1Y % Growth	10Y $ Growth	10Y % Growth
HOUSE	$650	− $20	−3.0%	+ $225	+53%
UNIT	$610	+ $50	+8.9%	+ $220	+56%

Source: Neoval

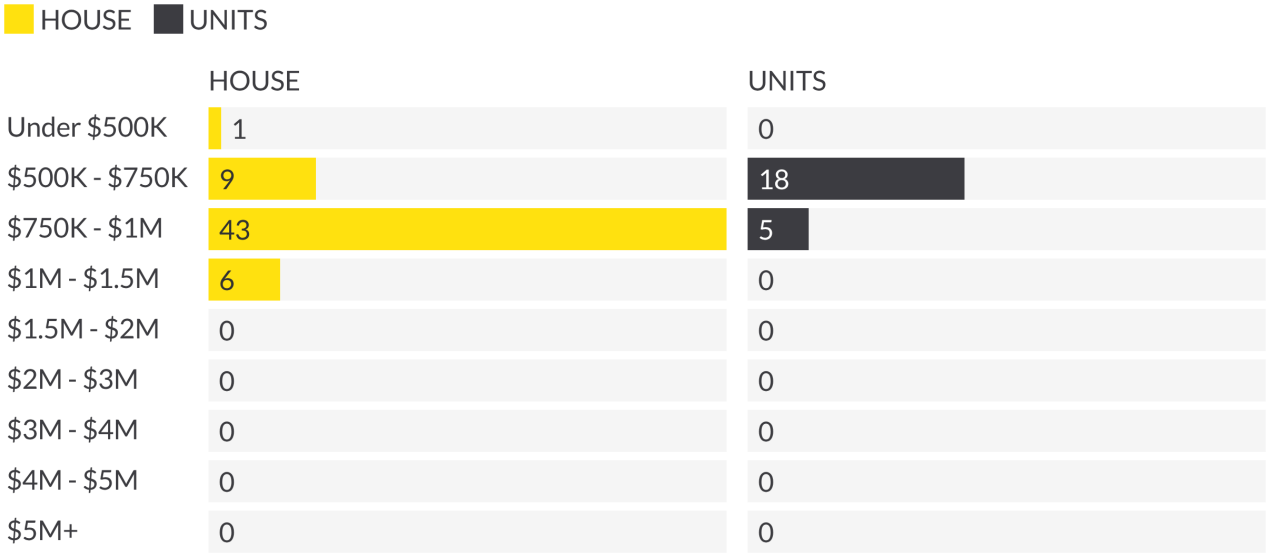

Isabella Plains rental price trend

Source: Neoval

Isabella Plains' median weekly house rental rate stands at approximately $650, reflecting an approximate 3% decline from this same month last year, representing an approximate $20 decrease. However, over the past decade, house rents have shown robust growth, increasing by approximately $225 or 52.9%. Unit rentals have demonstrated a stronger recent trajectory, with the median weekly rate approximated at $610, representing a solid gain of approximately 8.9% or $50 over the year. Looking back ten years, unit rents have also recorded substantial growth, climbing by an approximate $220 or 56.4%, notably outperforming some broader market trends. This sustained long-term appreciation across both property types coincides with ongoing demand.

Isabella Plains 12M rolling sales count

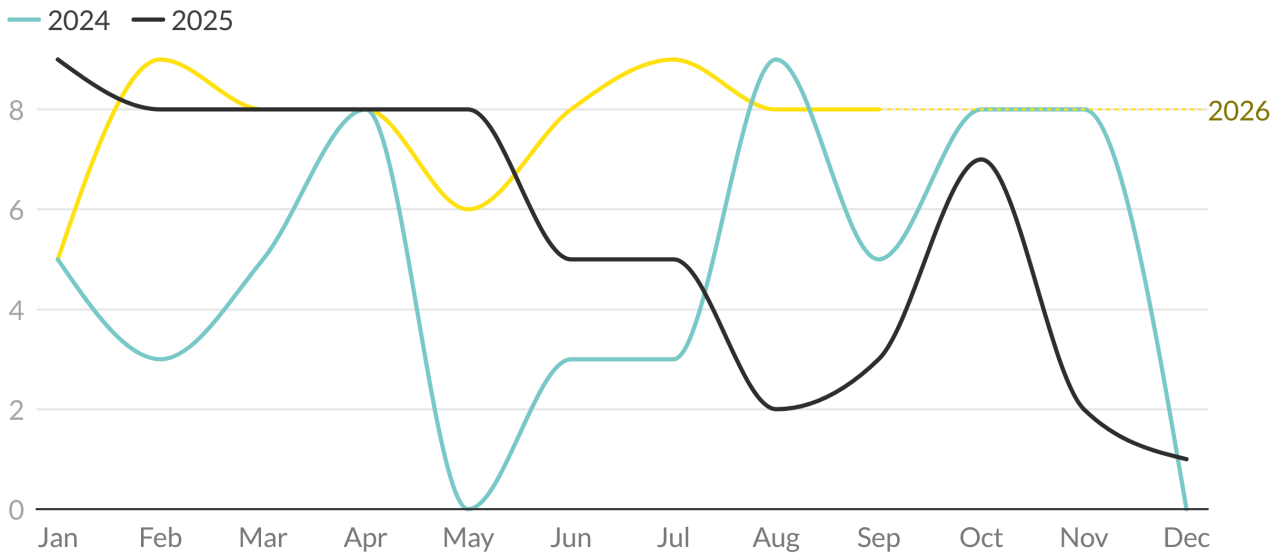

Source: Neoval

House sales in Isabella Plains, ACT, over the twelve months to July 2026 revealed a concentrated market, with 43 transactions recorded within the `$750K - $1M` bracket, representing the dominant mid-tier segment. The `$500K - $750K` range also saw activity with 9 house sales, and 6 properties trading between `$1M - $1.5M`. Unit sales showed strong engagement in the `$500K - $750K` range, totalling 18, reflecting a key affordability tier. Minimal activity was observed below `$500K` for houses and none for units, with no sales recorded above `$1.5M` for either property type, defining the suburb's prevailing price structure.

Isabella Plains monthly volume of new listings over the past 3 years

Number of new monthly listings

Listings from whole market including Ray White.

Source: Neoval

New listings in Isabella Plains held steady month-on-month in September 2026, reaching 8 properties. This stability occurred alongside a substantial 166.7% annual increase compared to September 2025, and a solid 60% gain from two years prior in September 2024. The current activity reflects an increase in new stock entering the market over the past year, representing a sustained period of stronger vendor engagement compared to previous years. This growth in listings maintains its upward trajectory, outperforming the more constrained supply observed in broader markets.

Methodology

Pricing data

Price data is sourced from our research partners at Neoval Research Group, providing comprehensive coverage across all major Australian capital cities and regional markets. Price movements are calculated using median values to ensure accurate representation of typical market performance.

Why median?

The median provides a reliable measure of the "typical" market price by identifying the middle value when all sales are arranged in order. Unlike arithmetic averages, which can be distorted by extreme high or low sales, the median represents the price point where half the properties sold for more and half sold for less. This methodology is particularly valuable when analysing property markets as it reduces the impact of outliers – such as exceptionally expensive waterfront properties or distressed sales – providing a truer reflection of what most buyers and sellers experience in the market. The median effectively captures the centre of the market distribution, making it an ideal measure for tracking genuine price movements over time.
Tasmania exception: Due to licensing restrictions, median data from Neoval is not available for Tasmania. For Tasmanian markets, we utilise the Median Sales AVM Value from Cotality, which represents the median (50th percentile) estimated sales value of all properties based on the hedonic imputation method.

ABS region segmentation and naming convention

Our analysis utilises the Australian Bureau of Statistics (ABS) geographical classification system, employing GCC, SA4, SA3 and SA2 naming conventions as the statistical and computational standard established by the ABS. This hierarchical structure provides a consistent framework for analysing property markets at various geographical scales, from major metropolitan areas down to individual SA2s. The visual representation and practical application of these classifications can be explored through the ABS mapping portal at https://maps.abs.gov.au, which displays the 2021 GCC, SA4, SA3 and SA2 shape files. These are the same shape files and naming conventions used by Neoval in their price modelling computations, ensuring consistency between our data sources and official statistical boundaries.

For comparative analysis purposes, the Sunshine Coast and Gold Coast regions are classified alongside GCC Major City regions. This classification reflects their substantial price growth over recent years and their common comparison with major metropolitan markets. Given their economic significance and market characteristics, these regions are considered Major City regions for the purposes of this analysis.

Listing data

National property listing volumes are sourced from Domain, Australia's leading property portal, providing comprehensive coverage of new property listings across all markets. National listings: presented as monthly counts spanning the last three years (2023-2025) to identify seasonal patterns and year-over-year trends in property supply. Major city and regional listings: current month data is presented with both monthly percentage change (comparison to previous month) and annual percentage change (comparison to same month in previous year) to highlight both short-term fluctuations and longer-term supply trends.

Sales count data

Sales count data by price point is sourced from Australian Property Monitors (APM) and Valuer General records, providing transaction data across all fixed price segments for market segmentation analysis. While filtered for residential properties only, some commercial or rural properties may be incorrectly classified as residential in the source data, potentially affecting data precision.

Temporal framework

All data series are presented on a monthly basis covering the three-year period from 2023 to 2025, enabling identification of seasonal patterns, cyclical trends, and year-over-year comparisons. This timeframe captures the full interest rate cycle from peak rates through to the current cutting cycle, providing context for current market dynamics. All data sources represent substantial market coverage but may not capture 100 per cent of market activity. Price data from Neoval provides broad market representation. Regional variations in data coverage may exist, with metropolitan markets generally providing more comprehensive data.

Commentary Generation Methodology

The market commentary throughout this report was generated using Google's Gemini 2.5 Flash, a state-of-the-art large language model chosen for its exceptional ability to analyse complex datasets and translate them into clear market insights. The model was fed comprehensive data from both our national report along with region specific metrics, enabling it to contextualise local movements within broader market trends. Through multiple iterations of refinement, we optimised the system to provide straightforward, factual descriptions of the data presented in charts and tables, avoiding speculation while highlighting key trends and significant data points. This approach represents our ongoing efforts to deliver consistent, data-driven commentary that accurately reflects underlying market information in accessible language for both property professionals and general readers.
