Theodore 10 year price trend

Source: Neoval

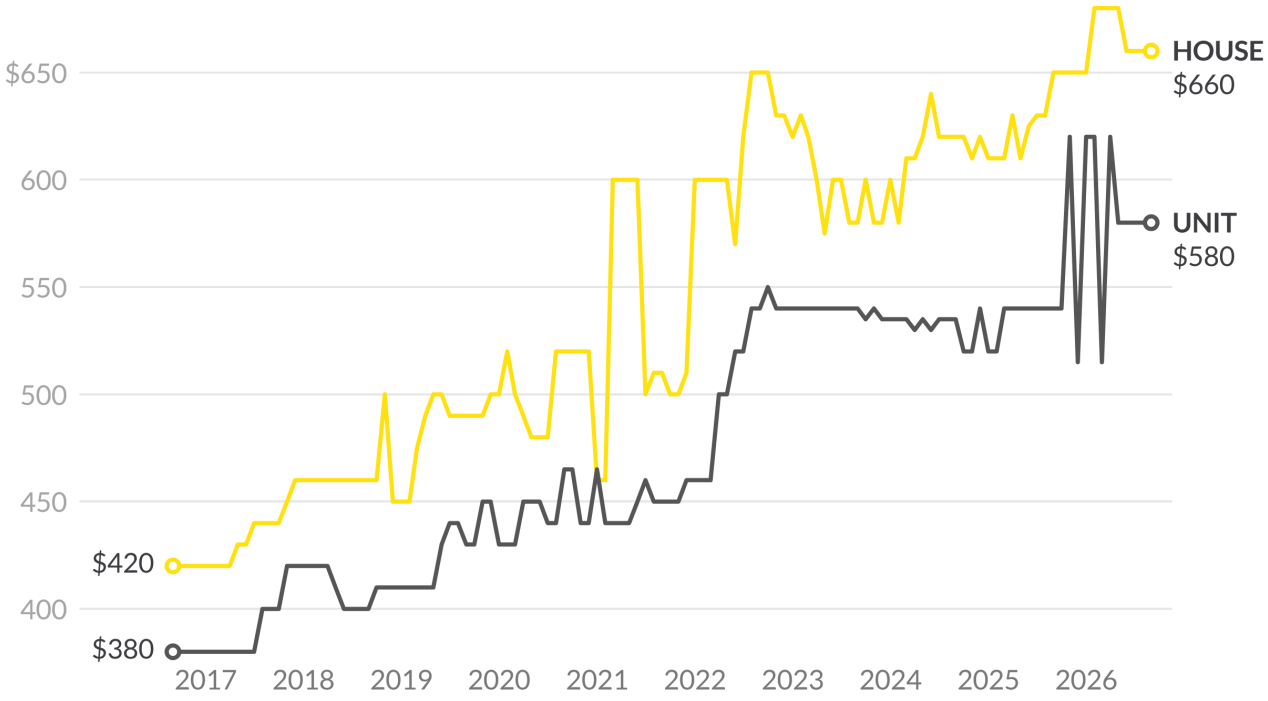

In Theodore, the median house price in September 2026 registered at approximately $900K, recording a solid 3.3% gain compared to this same month last year. Looking back a decade, house values show an impressive 83.7% growth. Median unit prices, at approximately $640K, continued their upward trajectory with a 1% yearly increase, and a significant 87.5% rise over the last ten years. This robust local performance reflects a market maintaining its premium position, coinciding with resilient trends across the broader capital city landscape.

Theodore rental price growth

Property	Current Price	1Y $ Growth	1Y % Growth	10Y $ Growth	10Y % Growth
HOUSE	$660	+ $10	+1.5%	+ $240	+57%
UNIT	$580	+ $40	+7.4%	+ $200	+53%

Theodore rental price trend

Source: Neoval

Theodore's median weekly house rental rate stood at approximately $660 in September 2026, recording a solid 1.5% increase from this same month last year. This trend reflects a continued upward trajectory, with a notable 57.1% growth over the past decade. Units in the suburb also performed strongly, with a median weekly rental rate of approximately $580, representing a significant 7.4% rise compared to this time last year, outpacing house rental growth. Over the last ten years, unit rents have climbed by 52.6%, maintaining robust long-term performance and reflecting stronger growth than capital city unit trends observed elsewhere.

Theodore 12M rolling sales count

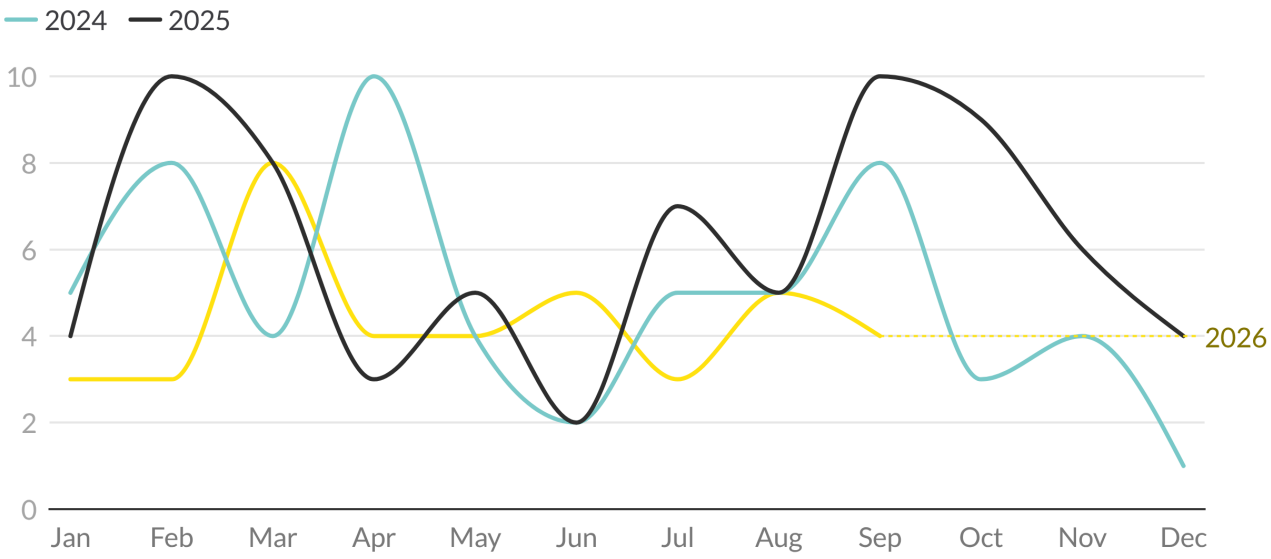

Source: Neoval

As of July 2026, Theodore's property market reflects a robust spread of sales across key price brackets. Houses predominantly transacted in the $750K to $1M range with 37 sales, alongside 14 properties selling between $1M and $1.5M, representing a solid mid-to-upper tier segment. Unit sales, totaling 14, were concentrated within the $500K to $750K bracket, demonstrating accessible entry points, while one unit sold under $500K and another between $750K and $1M. This distribution showcases a dynamic market maintaining its premium position, particularly for detached homes, a trend consistent with stronger capital city movements.

Theodore monthly volume of new listings over the past 3 years

Number of new monthly listings

Listings from whole market including Ray White.

Source: Neoval

New listings in September 2026 in Theodore recorded a significant 20% monthly drop from August, reaching just 4 properties. This figure also represents a substantial 60% decrease from September 2025 and a 50% decline compared to September 2024, reinforcing limited vendor activity in the market. The persistent low volume of new listings reflects ongoing supply constraints, a trend observed across broader markets, coinciding with continued caution among potential sellers.

Methodology

Pricing data

Price data is sourced from our research partners at Neoval Research Group, providing comprehensive coverage across all major Australian capital cities and regional markets. Price movements are calculated using median values to ensure accurate representation of typical market performance.

Why median?

The median provides a reliable measure of the "typical" market price by identifying the middle value when all sales are arranged in order. Unlike arithmetic averages, which can be distorted by extreme high or low sales, the median represents the price point where half the properties sold for more and half sold for less. This methodology is particularly valuable when analysing property markets as it reduces the impact of outliers – such as exceptionally expensive waterfront properties or distressed sales – providing a truer reflection of what most buyers and sellers experience in the market. The median effectively captures the centre of the market distribution, making it an ideal measure for tracking genuine price movements over time.
Tasmania exception: Due to licensing restrictions, median data from Neoval is not available for Tasmania. For Tasmanian markets, we utilise the Median Sales AVM Value from Cotality, which represents the median (50th percentile) estimated sales value of all properties based on the hedonic imputation method.

ABS region segmentation and naming convention

Our analysis utilises the Australian Bureau of Statistics (ABS) geographical classification system, employing GCC, SA4, SA3 and SA2 naming conventions as the statistical and computational standard established by the ABS. This hierarchical structure provides a consistent framework for analysing property markets at various geographical scales, from major metropolitan areas down to individual SA2s. The visual representation and practical application of these classifications can be explored through the ABS mapping portal at https://maps.abs.gov.au, which displays the 2021 GCC, SA4, SA3 and SA2 shape files. These are the same shape files and naming conventions used by Neoval in their price modelling computations, ensuring consistency between our data sources and official statistical boundaries.

For comparative analysis purposes, the Sunshine Coast and Gold Coast regions are classified alongside GCC Major City regions. This classification reflects their substantial price growth over recent years and their common comparison with major metropolitan markets. Given their economic significance and market characteristics, these regions are considered Major City regions for the purposes of this analysis.

Listing data

National property listing volumes are sourced from Domain, Australia's leading property portal, providing comprehensive coverage of new property listings across all markets. National listings: presented as monthly counts spanning the last three years (2023-2025) to identify seasonal patterns and year-over-year trends in property supply. Major city and regional listings: current month data is presented with both monthly percentage change (comparison to previous month) and annual percentage change (comparison to same month in previous year) to highlight both short-term fluctuations and longer-term supply trends.

Sales count data

Sales count data by price point is sourced from Australian Property Monitors (APM) and Valuer General records, providing transaction data across all fixed price segments for market segmentation analysis. While filtered for residential properties only, some commercial or rural properties may be incorrectly classified as residential in the source data, potentially affecting data precision.

Temporal framework

All data series are presented on a monthly basis covering the three-year period from 2023 to 2025, enabling identification of seasonal patterns, cyclical trends, and year-over-year comparisons. This timeframe captures the full interest rate cycle from peak rates through to the current cutting cycle, providing context for current market dynamics. All data sources represent substantial market coverage but may not capture 100 per cent of market activity. Price data from Neoval provides broad market representation. Regional variations in data coverage may exist, with metropolitan markets generally providing more comprehensive data.

Commentary Generation Methodology

The market commentary throughout this report was generated using Google's Gemini 2.5 Flash, a state-of-the-art large language model chosen for its exceptional ability to analyse complex datasets and translate them into clear market insights. The model was fed comprehensive data from both our national report along with region specific metrics, enabling it to contextualise local movements within broader market trends. Through multiple iterations of refinement, we optimised the system to provide straightforward, factual descriptions of the data presented in charts and tables, avoiding speculation while highlighting key trends and significant data points. This approach represents our ongoing efforts to deliver consistent, data-driven commentary that accurately reflects underlying market information in accessible language for both property professionals and general readers.
