Hughes 10 year price trend

Source: Neoval

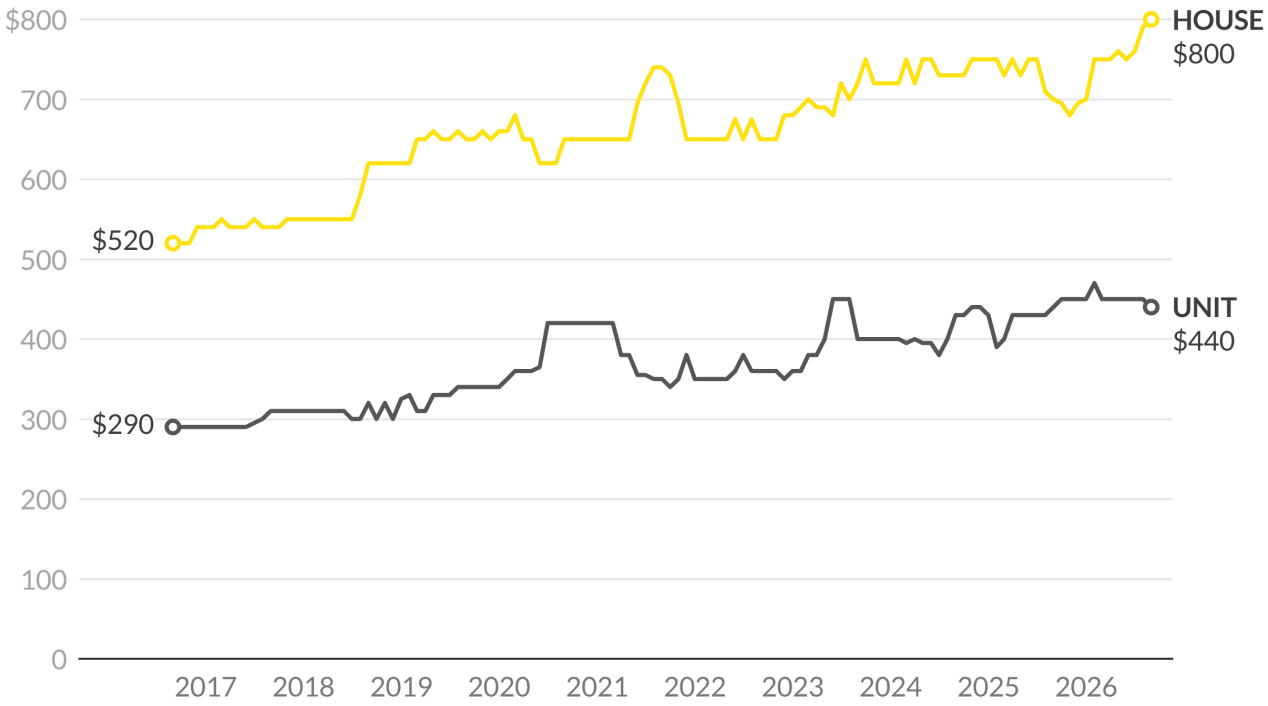

The median house price in Hughes currently stands at approximately $1.28M, reflecting a 5.5% decrease compared to this same month last year, yet it maintains a robust long-term gain of 50.8% over the past decade. Meanwhile, unit median prices have recorded a solid gain, reaching approximately $390K. This represents a substantial 16.7% rise over the last year, coinciding with an impressive 53.4% growth since this same month 10 years ago. This mixed performance, with units showing stronger annual growth, reflects unique local market dynamics compared to broader capital city trends.

Hughes rental price growth

Property	Current Price	1Y $ Growth	1Y % Growth	10Y $ Growth	10Y % Growth
HOUSE	$800	+ $100	+14.3%	+ $280	+54%
UNIT	$440	± $0	±0.0%	+ $150	+52%

Source: Neoval

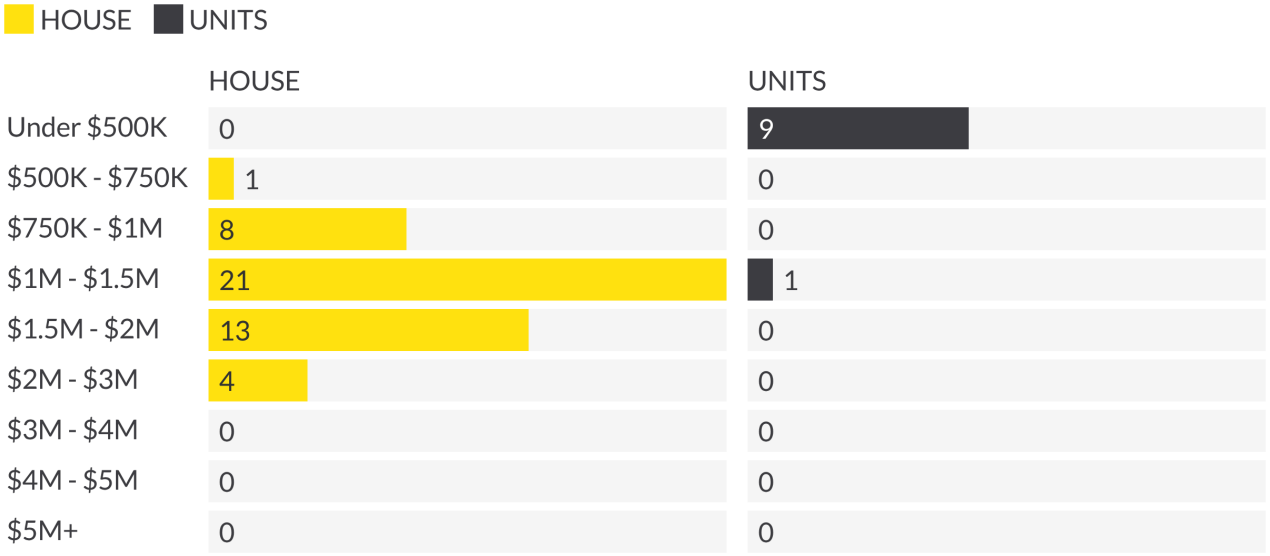

Hughes rental price trend

Source: Neoval

Hughes' rental market in September 2026 reflects sustained demand, with median weekly house rental rates approximating $800. This represents a solid 14.3% increase compared to this same month last year and a substantial 53.8% surge over the past decade, demonstrating stronger growth than broader capital city trends. For units, the median weekly rental rate holds at an approximate $440, reflecting no change from this same month last year, yet recorded a notable 51.7% increase over the last ten years. This represents a softer annual performance compared to broader capital city unit trends.

Hughes 12M rolling sales count

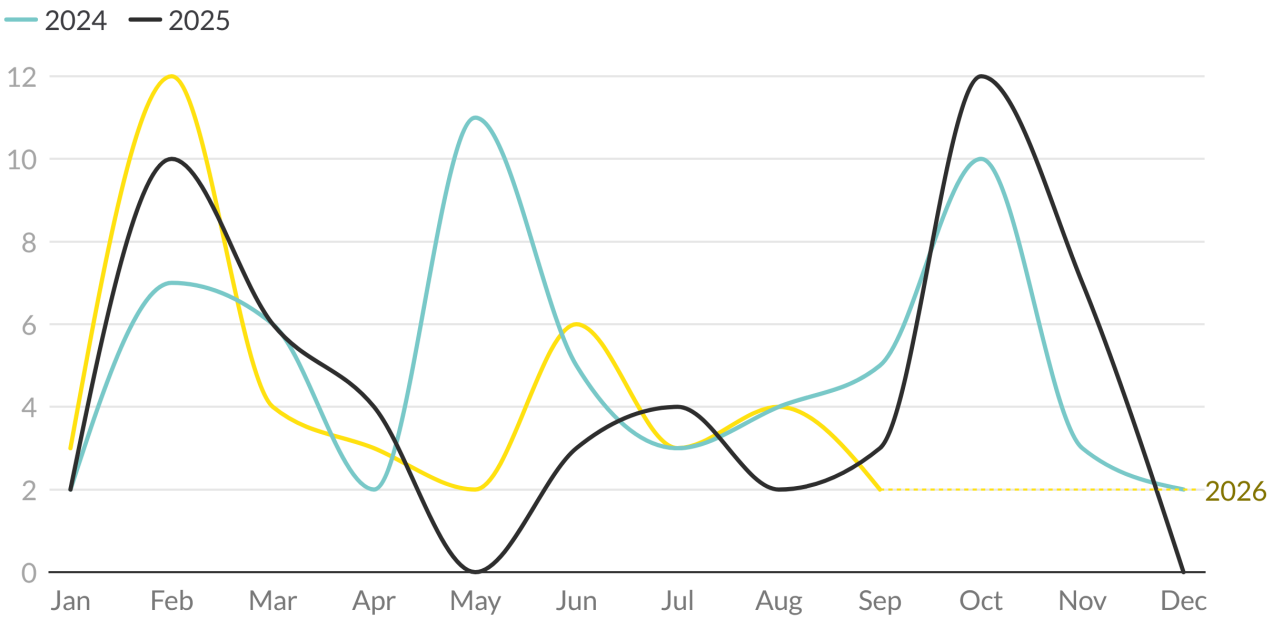

Source: Neoval

Hughes' property market as of July 2026 reflects robust demand across premium house price points and accessible unit options. Houses recorded a solid gain in the $1.0M to $1.5M range with 21 sales, maintaining its premium position, while 13 transactions occurred at $1.5M to $2.0M. Further demonstrating its high-value segment, four homes transacted within the $2.0M to $3.0M bracket. Units largely catered to the Under $500K segment, with nine sales, representing strong entry-level activity, coinciding with one unit sale in the $1.0M to $1.5M range. This distribution underscores a market with a clear divide between high-value houses and more affordable units.

Hughes monthly volume of new listings over the past 3 years

Number of new monthly listings

Listings from whole market including Ray White.

Source: Neoval

New listings in September 2026 recorded a sharp 50% monthly decline in Hughes, ACT, reaching just 2 properties. This figure also represents a 33% annual decrease compared to September 2025 and a substantial 60% fall from September 2024, reinforcing limited vendor activity in the area. Such trends reflect persistent supply constraints within the market, coinciding with broader challenges in vendor confidence seen across some capital city trends.

Methodology

Pricing data

Price data is sourced from our research partners at Neoval Research Group, providing comprehensive coverage across all major Australian capital cities and regional markets. Price movements are calculated using median values to ensure accurate representation of typical market performance.

Why median?

The median provides a reliable measure of the "typical" market price by identifying the middle value when all sales are arranged in order. Unlike arithmetic averages, which can be distorted by extreme high or low sales, the median represents the price point where half the properties sold for more and half sold for less. This methodology is particularly valuable when analysing property markets as it reduces the impact of outliers – such as exceptionally expensive waterfront properties or distressed sales – providing a truer reflection of what most buyers and sellers experience in the market. The median effectively captures the centre of the market distribution, making it an ideal measure for tracking genuine price movements over time.
Tasmania exception: Due to licensing restrictions, median data from Neoval is not available for Tasmania. For Tasmanian markets, we utilise the Median Sales AVM Value from Cotality, which represents the median (50th percentile) estimated sales value of all properties based on the hedonic imputation method.

ABS region segmentation and naming convention

Our analysis utilises the Australian Bureau of Statistics (ABS) geographical classification system, employing GCC, SA4, SA3 and SA2 naming conventions as the statistical and computational standard established by the ABS. This hierarchical structure provides a consistent framework for analysing property markets at various geographical scales, from major metropolitan areas down to individual SA2s. The visual representation and practical application of these classifications can be explored through the ABS mapping portal at https://maps.abs.gov.au, which displays the 2021 GCC, SA4, SA3 and SA2 shape files. These are the same shape files and naming conventions used by Neoval in their price modelling computations, ensuring consistency between our data sources and official statistical boundaries.

For comparative analysis purposes, the Sunshine Coast and Gold Coast regions are classified alongside GCC Major City regions. This classification reflects their substantial price growth over recent years and their common comparison with major metropolitan markets. Given their economic significance and market characteristics, these regions are considered Major City regions for the purposes of this analysis.

Listing data

National property listing volumes are sourced from Domain, Australia's leading property portal, providing comprehensive coverage of new property listings across all markets. National listings: presented as monthly counts spanning the last three years (2023-2025) to identify seasonal patterns and year-over-year trends in property supply. Major city and regional listings: current month data is presented with both monthly percentage change (comparison to previous month) and annual percentage change (comparison to same month in previous year) to highlight both short-term fluctuations and longer-term supply trends.

Sales count data

Sales count data by price point is sourced from Australian Property Monitors (APM) and Valuer General records, providing transaction data across all fixed price segments for market segmentation analysis. While filtered for residential properties only, some commercial or rural properties may be incorrectly classified as residential in the source data, potentially affecting data precision.

Temporal framework

All data series are presented on a monthly basis covering the three-year period from 2023 to 2025, enabling identification of seasonal patterns, cyclical trends, and year-over-year comparisons. This timeframe captures the full interest rate cycle from peak rates through to the current cutting cycle, providing context for current market dynamics. All data sources represent substantial market coverage but may not capture 100 per cent of market activity. Price data from Neoval provides broad market representation. Regional variations in data coverage may exist, with metropolitan markets generally providing more comprehensive data.

Commentary Generation Methodology

The market commentary throughout this report was generated using Google's Gemini 2.5 Flash, a state-of-the-art large language model chosen for its exceptional ability to analyse complex datasets and translate them into clear market insights. The model was fed comprehensive data from both our national report along with region specific metrics, enabling it to contextualise local movements within broader market trends. Through multiple iterations of refinement, we optimised the system to provide straightforward, factual descriptions of the data presented in charts and tables, avoiding speculation while highlighting key trends and significant data points. This approach represents our ongoing efforts to deliver consistent, data-driven commentary that accurately reflects underlying market information in accessible language for both property professionals and general readers.
